Cybersecurity and Infrastructure Security Agency
Fiscal Year 2019
SAFECOM Guidance on Emergency Communications Grants
A Message to Stakeholders

On behalf of the Cybersecurity and Infrastructure Security Agency (CISA), I am releasing the Fiscal Year 2019 SAFECOM Guidance on Emergency Communications Grants (SAFECOM Guidance). This document is updated annually to provide current information on emergency communications policies, eligible costs, best practices, and technical standards for state, local, tribal, and territorial grant recipients investing federal funds in emergency communications projects.

The SAFECOM Guidance aligns with the National Emergency Communications Plan (NECP), which emphasizes the need to enhance governance structures, plans, and protocols that enable the emergency response community to communicate and share information under all circumstances. It aims to maximize the use of all communications capabilities available to public safety officials—voice, video, and data—and to ensure the security of data and information exchange. To accomplish this, grant recipients must engage the whole community in preparedness activities. Similarly, the SAFECOM Guidance addresses the rapidly evolving emergency communications ecosystem and encourages grant recipients to support the concepts and recommendations within the NECP.

This year’s funding priorities remain consistent with previous SAFECOM Guidance releases. Department of Homeland Security grant recipients investing in emergency communications are still required to comply with SAFECOM Guidance Appendix D. All grant applicants are encouraged to coordinate with their statewide governance bodies and emergency communications leaders (e.g., Statewide Interoperability Coordinators) to ensure projects support the state, local, tribal, or territory’s strategy to improve interoperable emergency communications. In addition, grant applicants should work with public and private entities, and across jurisdictions and disciplines, to assess needs, plan projects, coordinate resources, and improve response through cross-training and joint exercises. These coordination efforts are important to ensure interoperability remains a top priority.

The SAFECOM Guidance encourages grant applicants to participate, support, and invest in planning activities that will help states or territories prepare for deployment of new emergency communications systems or technologies. At the same time, there is a need to sustain current land mobile radio (LMR) systems into the foreseeable future. Grant recipients should continue developing plans and standard operating procedures, conducting training and exercises, and investing in standards-based equipment to sustain LMR capabilities, while concurrently planning for the integration and deployment of new technologies. Grant recipients must also consider cybersecurity risks across all capabilities when planning operable, interoperable, and continuity of communications.

As in previous years, CISA developed the SAFECOM Guidance in partnership with SAFECOM and the National Council of Statewide Interoperability Coordinators. CISA also consulted federal partners and the Emergency Communications Preparedness Center to ensure emergency communications policies are coordinated and consistent across the Federal Government. Grant applicants are encouraged to reference this document when developing emergency communications investments for federal funding, and to direct any questions to my office at oec@hq.dhs.gov.

Ronald Hewitt
Assistant Director for Emergency Communications
Cybersecurity and Infrastructure Security Agency
U.S. Department of Homeland Security

1. Introduction

The Department of Homeland Security (DHS) is mandated to administer responsibilities and authorities relating to the SAFECOM Program. Within DHS, the Cybersecurity and Infrastructure Security Agency (CISA) Emergency Communications Division—formerly the Office of Emergency Communications—is responsible for developing coordinated guidance for federal grant programs for public safety communications. As a result, CISA develops the annual SAFECOM Guidance on Emergency Communications Grants (SAFECOM Guidance) as a reference guide for entities applying for federal financial assistance for emergency communications projects. While only entities funding emergency communications projects with DHS grant funding are required to comply with SAFECOM Guidance (see Appendix D), all entities are highly encouraged to follow the recommendations within this document to ensure interoperable, resilient, and fully effective communications.

The SAFECOM Guidance provides general information on eligible activities, technical standards, and other terms and conditions that are common to most federal emergency communications grants. It aims to ensure that policies and standards across federal grant programs provide a consistent approach to improving emergency communications nationwide. The SAFECOM Guidance achieves this consistency by aligning recommendations with the Nation’s strategic plan for emergency communications, entitled the National Emergency Communications Plan (NECP).

SAFECOM is a public safety-driven program sponsored by CISA, which develops policy, guidance, and future efforts by drawing on SAFECOM member expertise and recommendations. The DHS Office for Interoperability and Compatibility also supports SAFECOM-related research, development, testing, evaluation, as well as the acceleration of standards. SAFECOM works to build partnerships among all levels of government, linking the strategic planning, technical support, and implementation needs of the emergency response community with federal, state, local, tribal, and territorial governments, to improve communications.

Additionally, CISA consulted members of the Emergency Communications Preparedness Center, which coordinates roles and activities of agencies across the Federal Government to improve interoperable public safety and emergency response communications. It consists of 14 federal departments and agencies representing the government’s broad role in improving coordination of emergency communications efforts, including information sharing, planning, regulation, policy, operations, grants, and technical assistance. Together, SAFECOM members and federal partners coordinate on emergency communications policy and standards to ensure projects are compatible, interoperable, and most importantly, meet needs of end-users.

1.1 Purpose of SAFECOM Guidance

The SAFECOM Guidance provides guidance to grant recipients on:

- Recommendations for planning, coordinating, and implementing projects
- Emergency communications activities that can be funded through federal grants
- Best practices, policies, and technical standards that help to improve interoperability
- Resources to help grant recipients comply with technical standards and grant requirements

---

1 6 U.S.C. § 571(c)(2) and 6 U.S.C. § 574.
2 Federal financial assistance includes grants, loans, cooperative agreements, and other funds provided by the Federal Government. For this document, these terms are used interchangeably unless otherwise indicated.
3 For more information on the NECP, see: https://www.dhs.gov/cisa/national-emergency-communications-plan.
4 In accordance with Title 2 of the Code of Federal Regulations (CFR) 200, the terms “recipient” and “sub-recipient” is defined as a non-federal entity that receives a federal award directly from a federal awarding agency to carry out an activity under a federal program.
The SAFECOM Guidance is designed to promote and align with the national vision established in the NECP. CISA is leading a second update to the NECP that will build upon revisions made in 2014, while also positioning the NECP to maintain relevance into the future. Proposed updates to the NECP goals and objectives aim to enhance emergency communications capabilities at all levels of government in coordination with the private sector, nongovernmental organizations, and communities across the Nation. Once the 2019 update to the NECP is finalized, CISA will focus on implementing goals and objectives. Critical components for advancing emergency communications fall under three national priorities:

- Enhance effective governance across partners with a stake in emergency communications, embracing a shared responsibility of the whole community
- Address interoperability challenges posed by rapid technology advancements and increased data sharing, ensuring critical information gets to the right people at the right time
- Build resilient and secure emergency communications systems to reduce cybersecurity threats and vulnerabilities

Recommendations within the SAFECOM Guidance are intended to help state, local, tribal, and territorial stakeholders develop projects that meet critical emergency communications needs defined in the NECP and their Statewide Communication Interoperability Plan (SCIP). Best practices and technical standards located within the SAFECOM Guidance help ensure federally-funded investments are interoperable, fully effective and reliable, and support national policies. However, not all guidance is applicable to all grant programs. Grants funding emergency communications are administered by numerous federal agencies and are subject to various statutory and programmatic requirements. As a result, grant applicants and recipients should review specific grant guidance carefully to ensure their proposed activities are eligible, and all standards, terms, and conditions required by the program are met.

1.2 Report Methodology

CISA consulted with local, state, and federal partners to develop the SAFECOM Guidance, including:

- Emergency Communications Preparedness Center (ECPC) Grants Focus Group
- Federal Communications Commission (FCC)
  - Public Safety and Homeland Security Bureau (PSHSB)
- SAFECOM and the National Council of Statewide Interoperability Coordinators (NCSWIC)
- U.S. Department of Commerce
  - First Responder Network Authority (FirstNet Authority)
  - National Institute of Standards and Technology (NIST)
  - National Telecommunications and Information Administration (NTIA)
- U.S. Department of Homeland Security
  - Federal Emergency Management Agency (FEMA)
  - Integrated Public Alert and Warning System (IPAWS)
  - Office for Interoperability and Compatibility
- U.S. Department of Justice
  - Office of Justice Programs
- U.S. Department of Transportation
  - National Highway Traffic Safety Administration (NHTSA)

---

5 For information on SCIPs, see: [http://www.dhs.gov/statewide-communication-interoperability-plans](http://www.dhs.gov/statewide-communication-interoperability-plans).
6 For the purposes of this document, “grant guidance” may include Funding Opportunity Announcements, Grant Notices, Grant Applications, and other formal notices of grants and federal financial assistance programs.
7 The ECPC Grants Focus Group is comprised of grant officers, program administrators, and communications experts representing the 14 federal agencies that participate in the ECPC.
8 For a list of SAFECOM members, see: [http://www.dhs.gov/safecom/membership](http://www.dhs.gov/safecom/membership).
1.3 Use of SAFECOM Guidance

The SAFECOM Guidance should be used during planning, development, and implementation of emergency communications projects and in conjunction with other planning documents. Before proposing projects for funding, prospective applicants are encouraged to read the NECP, federal and state preparedness documents such as statewide plans and reports, and the SAFECOM Guidance to ensure projects support federal, state, local, tribal, and territorial plans for improving emergency communications. Table 1 provides a list of essential resources available to recipients.

Table 1. Essential Resources for Emergency Communications Grant Recipients

<table>
<thead>
<tr>
<th>Resources</th>
<th>Descriptions</th>
</tr>
</thead>
<tbody>
<tr>
<td>National Emergency Communication Plan</td>
<td>The NECP is the Nation’s strategic plan that promotes communication and information sharing across all levels of government, jurisdictions, disciplines, and organizations for all threats and hazards, as needed and when authorized. It provides information and guidance to those that plan for, coordinate, invest in, and use communications to support response operations. Grant applicants are encouraged to read the NECP to understand the national strategy, and to ensure investments support the goals and objectives. The NECP is available at: <a href="https://www.dhs.gov/cisa/national-emergency-communications-plan">https://www.dhs.gov/cisa/national-emergency-communications-plan</a>.</td>
</tr>
<tr>
<td>Statewide Communication Interoperability Plan</td>
<td>The SCIP contains the state, territory, or tribal government’s strategy to improve emergency communications. States and territories were required to develop and submit a SCIP to DHS by December 2008 and required to submit reports annually on the progress of the state or territory in implementing its SCIP. Many federal grants funding emergency communications require grant applicants to align projects to needs identified in SCIPs. Grant recipients and sub-recipients should review the SCIP for their state/territory and work with their Statewide Interoperability Coordinator (SWIC) to ensure investments support statewide plans to improve communications. To find your state’s SCIP, please contact your SWIC. To find the SWIC for your state or territory, contact CISA at: <a href="mailto:oec@hq.dhs.gov">oec@hq.dhs.gov</a>.</td>
</tr>
<tr>
<td>SAFECOM Website</td>
<td>The SAFECOM website provides information and resources for public safety agencies developing emergency communications projects. For the most recent SAFECOM Guidance and list of grants funding emergency communications, see the SAFECOM website at: <a href="https://www.dhs.gov/safecom">https://www.dhs.gov/safecom</a>.</td>
</tr>
<tr>
<td>IPAWS Website</td>
<td>This website contains information on IPAWS’s capabilities, who can use IPAWS to send alerts and warnings, and organizations that work with the IPAWS Program Management Office to support public alerts and warnings. IPAWS is accessed through software that meets IPAWS system requirements. There is no cost to send messages through IPAWS, although there may be costs associated with acquiring compatible alert origination software. Grant recipients are encouraged to invest in alerting software. IPAWS is not mandatory and does not replace existing methods of alerting, but instead complements existing systems and offers new capabilities to deliver timely and actionable alerts. See the IPAWS website at: <a href="https://www.fema.gov/integrated-public-alert-warning-system">https://www.fema.gov/integrated-public-alert-warning-system</a> and information for alerting authorities at: <a href="https://www.fema.gov/alerting-authorities">https://www.fema.gov/alerting-authorities</a>.</td>
</tr>
</tbody>
</table>
### Resources

#### Statewide Interoperability Coordinator

States, territories, and tribal governments are encouraged to designate a full-time SWIC who has the authority and resources to actively improve interoperability with emergency management and response agencies across all levels of government. Grant applicants are strongly encouraged to coordinate project proposals with the SWIC to ensure projects support statewide efforts to improve emergency communications. To find your SWIC, contact CISA at: oec@hq.dhs.gov.

#### State Leadership

As required as a condition of the State and Local Implementation Grant Program (SLIGP) 2.0, each State and Territory Governor designated an individual or body to serve as coordinator of implementation of the grant funds known as the **Single Point of Contact (SPOC)**. Grant recipients are encouraged to consult with the appropriate point of contact or governance body for their state or territory when engaging in public safety broadband activities.

The **State Emergency Management Agency Director** is responsible for ensuring the state or territory is prepared to deal with any type of emergency, as well as coordinating statewide incident response. This includes collaborating with appropriate statewide representatives for critical capabilities, such as emergency communications, statewide 911 communications, and public alerting.

The **911 Administrator** manages the state or territory’s 911 functions as determined by state legislation. The official title and role of this position may vary. Grant recipients are encouraged to coordinate 911 projects with the Administrator to ensure projects support state or territory 911 efforts. To find your 911 Administrator, refer to the National Association of State 911 Administrators at: http://www.nasna911.org/state-911-contacts.

The **Homeland Security Director** coordinates the planning, development, and coordination of statewide policies developed in support of public and private organizations responsible for preventing terrorism, raising awareness, reducing vulnerabilities, responding to, and recovering from terrorist acts. To locate your Director or office, refer to: http://www.dhs.gov/state-homeland-security-contacts.

#### State Information Technology and Security Officials

including a state or territory’s Chief Information Officer, Chief Technology Officer, and Chief Information Security Officer manage key information technology (IT) initiatives, including IT procurement, security, and IT planning and budgeting.

#### State Governance

The **Statewide Interoperability Governing Body (SIGB)** or **State Interoperability Executive Committee (SIEC)** serve as the primary steering group for the statewide interoperability strategy that seek to improve emergency response communications across the State through enhanced data and voice communications interoperability. SIGBs and SIECs include representatives from various jurisdictions, disciplines, as well as subject matter experts. To find the SIGB or SIEC for your state or territory, contact CISA at: oec@hq.dhs.gov.

A **broadband working group** serves as the governing body for state or territory planning activities for the FirstNet Authority. Many states are using their SIGB or SIEC for planning or have created an independent working group focused on public safety broadband. Grant recipients are strongly encouraged to work with their respective group to ensure efforts do not contradict with the FirstNet Authority’s planning with the network.

The **911 Advisory Board** works with the 911 Administrator to plan and coordinate state and local 911 efforts. The official title and role of this board vary. Grant applicants are encouraged to coordinate 911 projects with the Board to ensure projects support state or territory 911 efforts. To find your 911 Advisory Board, refer to State 911 Contacts page of the National Association of State 911 Administrators at: http://www.nasna911.org/state-911-contacts.
1.4 Key Changes and Updates

This section highlights key changes to the *FY 2019 SAFECOM Guidance*:

- **Emergency Communications Priorities (Section 2).** This section reviews stakeholder-driven priorities including: 1) Governance and Leadership; 2) Statewide Planning and Procedures for Emergency Communications; 3) Emergency Communications Training and Exercises; 4) Activities that Enhance Operational Coordination; and 5) Standards-based Technology and Equipment.

  Based on lessons learned from recent federally-declared disasters, there is an urgent need to address communications survivability, resilience, and continuity. Rather than listing this as a separate priority, communications resilience and continuity should be viewed as a critical component across all priorities.

- **Before Applying (Section 3).** This section provides an updated overview of national policies, laws, and issues affecting emergency communications grants and the broader emergency communications ecosystem, as well as federal requirements and restrictions on funding that applicants should consider before applying.

- **Eligible Activities (Section 4).** This section includes a review of eligible costs and guidance for applicants to address NECP strategic goals and recommendations.

- **Emergency Communications Systems and Capabilities (Section 5).** This section provides an overview of emergency communications and the importance of deploying standards-based technology and equipment.

- **Grants Management Best Practices (Section 6).** This section provides best practices to ensure the effective implementation of grants and to establish the entity as a trusted steward of federal grant funding and a credible recipient of future grant funding.

- **Funding Sources (Section 7).** This section offers recommendations on how applicants should consider multiple funding sources, including traditional grants and other sources that may partially fund emergency communications projects.

- **Appendices.** The appendices include an acronym list, technical standards for emergency communications equipment, and resources recipients can reference when developing emergency communications projects. New this year, Appendix B has been restructured for better organization of technical standards to aid emergency communications planners.

  In Appendix D, DHS has outlined specific requirements for DHS/FEMA recipients to comply with *SAFECOM Guidance*. These requirements are in accordance with the DHS Standard Terms and Conditions of preparedness grants.
2. Emergency Communications Priorities

CISA is responsible for ensuring grant guidelines and priorities relating to interoperable emergency communications are coordinated and consistent with the NECP goals and recommendations. In support of this mandate, SAFECOM Guidance identifies five investment priorities. These priorities were developed in coordination with stakeholders and federal partners, and are informed by the NECP, as well as other applicable Presidential Policy Directives, federal statutes, and regulations. Grant recipients are encouraged to target grant funding toward the following priorities:

- Priority 1: Governance and Leadership
- Priority 2: Statewide Planning and Procedures for Emergency Communications
- Priority 3: Emergency Communications Training and Exercises
- Priority 4: Activities that Enhance Operational Coordination
- Priority 5: Standards-Based Technology and Equipment

2.1 Priority 1: Governance and Leadership

Strong governance and leadership structures are essential to effective decision-making, coordination, and planning for emergency communications. While the existence and growth in governance bodies is a significant accomplishment, many of these entities were originally established to address land mobile radio (LMR) interoperability issues. Evolving technology and rising expectations in emergency communications change the traditional roles and responsibilities within the public safety community, requiring strong, broader scopes and unified governing bodies. Fortunately, there is already a strong foundation for future progress. State, local, tribal, and territorial governments should focus on expanding or updating current structures, processes, and investments in governance and leadership.

In FY 2019, grant recipients are encouraged to invest in emergency communications governance and leadership structures for coordinating statewide and regional initiatives that reflect the evolving emergency communications environment. These investments are critical for assessing needs, conducting statewide planning, coordinating investments, ensuring projects support the SCIP, maintaining and improving communications systems, and planning for future communications improvements. Governance and leadership structures can also facilitate the development of operating procedures and planning mechanisms that establish priorities, objectives, strategies, and tactics during response operations.

For regional, cross-border initiatives, grant recipients should coordinate projects with national level emergency communications coordination bodies, such as the NCSWIC and the Regional Emergency Communications Coordination Working Groups (RECCWG). The NCSWIC promotes and coordinates state level activities designed to ensure the highest level of public safety communications across the Nation. RECCWGs are congressionally-mandated planning and coordination bodies located in each FEMA Region and provide a collaborative forum to assess and address the survivability, sustainability, operability, and interoperability of emergency communications systems at all levels of government. Grant-funded investments that are coordinated with these bodies will help ensure that federally-funded emergency communications investments are interoperable and support national policies.

---

To support this priority, grant recipients should target funding to:

- Develop/sustain the SIGB or SIEC activities and SWIC position
  - In accordance with DHS/FEMA requirements, all states and territories receiving Homeland Security Grant Program funds are required to designate a full-time SWIC who has the authority and resources to actively improve interoperability with emergency management and response agencies across all levels of government, to include establishing statewide plans, policies, and procedures, and coordinating decisions on communications investments
- Update governance structures and processes to address the evolving operating environment, including:
  - Include and coordinate with emergency communications leaders (e.g., 911 leaders, IPAWS Program Management Office, RECCWGs, utilities commissions) and representatives from multiple agencies, jurisdictions, disciplines, levels of government, tribes, rural areas, subject matter experts, and private industry to share information on emergency communications and initiatives
  - Review and update key operating documents for SIGB or SIEC (e.g., charters, agreements, policies, procedures) to ensure they are positioned to address new technology deployments and facilitate coordination with the SWIC
  - Integrate emergency communications governance and leadership into broader statewide planning efforts (e.g., FirstNet deployment post-State Plan period and radio access network buildout, 911 system migration, IT enhancements) to ensure emergency communications needs are represented
  - Increase regional structures or processes to foster multi-state coordination and information sharing
  - Conduct outreach and education to continually assess and address user needs
  - Develop governance to aid in coordination of messaging within partnering IPAWS Alerting Authorities; improve the common operating picture; and create awareness of existing plans, policies, and procedures

2.2 Priority 2: Statewide Planning and Procedures for Emergency Communications

The emergency communications community benefits from a comprehensive and inclusive approach to planning. The NECP recommends that response agencies seek to improve responders’ ability to communicate and share information with others through increased strategic planning, the adoption of standard operating procedures (SOPs) that integrate the capabilities of all users, and regular training and exercises. Through development and updating of their SCIPs, states, tribes, and territories engage multiple jurisdictions, disciplines, and levels of government in planning, incorporating all emergency communications needs. The SCIP serves as the primary strategic plan for emergency communications, while other plans outline specific operational coordination or tactical procedures, including Tactical Interoperable Communications Plans (TICPs) and FEMA Regional Emergency Communications Plans (RECPs). TICPs are designed to allow urban areas, counties, regions, states/territories, tribes, or federal agencies to document interoperable communications governance structures, technology assets, and usage policies and procedures. RECPs, along with their associated state, territorial, or tribal annexes, serve to identify emergency communications capability shortfalls and potential resource requirements.

Grant recipients are encouraged to leverage these planning resources as a source of input and reference for all emergency communications grant applications and investment justifications. Updating plans and SOPs to address emergency communications gaps, new technologies, and stakeholder needs helps to improve emergency communications and response across the whole community. This continuous and comprehensive planning enables agencies to effectively identify, prioritize, and coordinate to ensure proposed investments support statewide, tribal-wide, and territory-wide planning priorities.
In FY 2019, grant recipients should continue to target funding toward planning activities, including updates of statewide, tribal-wide, and territory-wide plans, and ensure plans incorporate the capabilities and needs of all emergency communications systems. The goal of this priority is to ensure emergency communications needs are continually assessed and integrated into risk assessments and preparedness plans, including continuity planning efforts. These planning activities must include analyzing threats and vulnerabilities that may affect communications resilience and developing investment plans and SOPs to mitigate identified risks. Stakeholders are encouraged to target funding toward planning, stakeholder outreach, assessment of user needs, and other activities that will help to engage the whole community in emergency communications planning initiatives.

To support this priority, grant recipients should target funding toward critical planning activities, including the following:

- **Update SCIs and other plans and procedures to:**
  - Reflect the NECP strategic goals and objectives
  - Incorporate whole community concepts
  - Address findings and gaps identified in state-level preparedness reports, risk and vulnerability assessments, and After-Action Reports (AAR) from real-world incidents and planned exercises
  - Identify and address FCC directives affecting current or planned public safety communications systems (e.g., narrowbanding, T-Band migration, systems operating in the 700 megahertz [MHz] public safety broadband spectrum, 800 MHz rebanding)
  - Incorporate a multifaceted approach to ensure the confidentiality, integrity, reliability, and availability of data

- **Support statewide emergency communications and preparedness planning efforts through allocation of funding to the following planning activities:**
  - Conduct and attend planning meetings
  - Engage the whole community in emergency communications planning, response, and risk identification
  - Develop risk and vulnerability assessments (e.g., cyber, threat and hazard identification and risk assessment [THIRA])
  - Integrate emergency communications assets and needs into state-level plans
  - Coordinate with SWIC, State Administrative Agency (SAA), and state-level planners (e.g., 911 planners, utilities commissions) to ensure proposed investments align to statewide plans and comply with technical requirements

- **Identify, review, establish, and improve SOPs in coordination with response agencies at all levels of government to:**
  - Ensure federal, state, local, tribal, and territorial roles and responsibilities are clearly defined
  - Ensure communications assets and capabilities are integrated, deployed, and utilized to maximize interoperability
  - Address threats and vulnerabilities and identify contingencies for the continuity of critical communications

- **Establish a cybersecurity plan including continuity of vulnerable communications components, such as Radio Frequency (RF)-based communications that do not rely on public infrastructure

---

11 Per the *National Preparedness Goal*, whole community is formally defined as, “A focus on enabling the participation in national preparedness activities of a wider range of players from the private and nonprofit sectors, including nongovernmental organizations and the general public, in conjunction with the participation of federal, state, and local governmental partners in order to foster better coordination and working relationships.”

12 Many federal grants are awarded to a designated SAA as the official recipient and administrator for the grant, responsible for sub-recipient oversight of grant-funded activities.
2.3 Priority 3: Emergency Communications Training and Exercises

NECP Goal Demonstrations, AARs, and similar assessments reveal that jurisdictions are better able to respond to emergencies due in part to regular training and exercises. Training and exercising help response personnel understand their communications roles and responsibilities during an emergency, as well as processes for working with other agencies. Further, as communications technologies continue to evolve, the need for training and exercises becomes even greater to ensure personnel are proficient in using existing and new technologies. The NECP recommends agencies involve responders from all levels of government, as well as non-governmental stakeholders, to practice a whole community response. It also recommends agencies utilize all types of communication technologies, and identify gaps and problems with technologies or protocols.

In FY 2019, grant recipients should continue to invest in communications-related training and exercises to address gaps identified in response and recovery operations, which should include thoroughly testing resiliency and continuity of communications. Grant recipients are encouraged to participate in training and exercises across all levels of government and with other entities that will better assist jurisdictions to prepare for disasters and identify, assess, and address capability gaps.

To support this priority, grant recipients should target funding toward certified training and exercise activities, including:

- Conduct National Incident Management System (NIMS)-compliant training (e.g., training in Incident Command System [ICS] and the ICS Communications Unit such as Communications Unit Leader [COML], Communications Technician [COMT], Radio Operator [RADO], Incident Tactical Dispatcher [INTD], Auxiliary Communications [AUXCOMM], and Incident Communication Center Manager [INCM])
- Improve states’, tribal, and territories’ ability to track and share trained Communications Unit personnel during response operations (e.g., include Communications Unit training plan within statewide plans such as the SCIP)
- Conduct frequent training and exercises involving personnel from all levels of government who are assigned to operate communications capabilities
- Perform exercises that support and demonstrate the adoption, implementation, and use of the NIMS concepts and principles
- Hold cross-training and state, regional, or national level exercises to validate plans and procedures to include tribes
- Provide training and exercises on new and existing systems, equipment, and SOPs including incorporating the use of broadband capabilities and exercises
- Provide training and exercises on new and existing systems, equipment, and SOPs
- Test communications survivability, resilience, and continuity of communications, to include validation of continuity procedures and operational testing of backup systems and equipment
- Assess and update training curriculums and exercise criteria to reflect changes in the operating environment and plain language protocols
- Identify opportunities to integrate private and public sector communications stakeholders into training and exercises, as well as cost-effective approaches (e.g., distance learning)
- Offer cyber training and education on the proper use and security of devices and applications, phishing, malware, other potential threats, and how to guard against attacks
- Provide regular training and exercises for alerting authorities incorporating the use of IPAWS

13 Regular training on NIMS/ICS concepts is needed to ensure new and existing staff are proficient in NIMS/ICS concepts. For NIMS-compliant training, see: https://www.fema.gov/training-0.
2.4 Priority 4: Activities that Enhance Operational Coordination

There has been significant improvement in capabilities at state, local, tribal, and territorial levels resulting in the ability of jurisdictions to more effectively coordinate communications resources and services during emergencies. This includes integration of capabilities, resources, and personnel across the whole community. As incidents escalate, communications resources must be able to expand rapidly to meet responders’ needs. This requires agencies to track communications resources they own or can access, then follow appropriate procedures to request and deploy resources to locations when needed.

In FY 2019, grant recipients are encouraged to update inventories of communications assets and share information within their state, tribe, or territory and region (e.g., neighboring states, tribes, or territories) that are most likely to request support during emergencies or events. This can be achieved by working with SWICs to update inputs to the Next Generation Communication Assets Survey and Mapping (CASM NextGen) Tool—a web-based tool that assists public safety agencies to collect and visualize data, and assess inter-agency interoperability based on communications assets and interoperability methods. Grant applicants and recipients should identify gaps in capabilities and target funding toward those gaps. In addition, grant recipients must continue to implement NIMS ICS principles during all emergencies. Grant applicants and recipients are also encouraged to actively engage neighboring jurisdictions—both internal and external to the state tribe, or territory—to coordinate response planning and seek mutual aid agreements for large-scale responses. Agencies should also collaborate and encourage alerting practices between levels of government including installing resilient communications to coordinate the distribution of alerts.

To support this priority, grant recipients should target funding to:

- Ensure inventories of emergency communications resources are updated and comprehensive
- Advance projects that promote assessment of communications assets, asset coordination, and resource sharing (e.g., CASM NextGen Tool)
- Conduct risk and vulnerability assessments
- Develop, integrate, or implement SOPs, including Incident Action Plans and ICS Form 205
- Incident Radio Communications Plans that enhance jurisdictions’ ability to readily request communications resources or assets during operations and address continuity of communications
- Implement projects that promote regional, intra- and inter-state collaboration
- Inventory and typing of resources and other activities that strengthen resilience and provide backup communications solutions (e.g., radio caches, cell on wheels)
- Address needs identified in statewide plans, AARs, or assessments
- Support communications initiatives that engage the whole community

2.5 Priority 5: Standards-based Technology and Equipment

The public safety community relies on LMR as its primary source for mission critical voice communications. As a result, agencies have prioritized maintaining LMR systems and equipment to deliver public safety requirements for interoperability, security, and reliability. Agencies are also adopting Internet Protocol (IP)-based technologies and services for data access and transmission. This integration of technologies presents new challenges, such as cybersecurity; therefore, agencies must improve understanding and preparations for security risks associated with IP-based communications systems. This requires the public safety community to implement effective strategies to enhance the resiliency of cyber

---

14 CISA developed a Public Safety Tools website, which provides support to the public safety community, including the CASM NextGen Tool, the Narrowband License Status Tool, the Response Level Communications Tool, and computer-based training courses. For more information, see: https://www.dhs.gov/cisa/interoperable-communications-technical-assistance-program.
and IP-based infrastructures and safeguard private and sensitive information transmitted and stored by connected systems devices.\textsuperscript{15}

In FY 2019, grant recipients should continue to invest in equipment that is standards-based to enable interoperability between agencies and jurisdictions, regardless of vendor. Grant recipients should include technical specifications in procurement agreements with vendors and obtain sufficient documentation to verify equipment is compliant to applicable standards. Grant recipients are strongly encouraged to invest in equipment that will sustain and maintain current LMR capabilities while planning for new technologies and capabilities that may not have fully defined standards. As emergency communications capabilities continue to evolve, recipients should participate in community outreach and planning to ensure new capabilities are interoperable and all user requirements are incorporated.

To support this priority, grant recipients should target funding to:

- Sustain and maintain current LMR capabilities
- Purchase and use Project 25 (P25) compliant LMR equipment (see P25 Compliance Assessment Program [CAP] approved equipment list) for mission critical voice communications\textsuperscript{16}
- Support rapid and far-ranging deployment of the Nationwide Public Safety Broadband Network (NPSBN) and use of FirstNet device and application portfolio dedicated for public safety using multi-layered, proven cybersecurity and network security solutions\textsuperscript{17}
- Meet FCC and FirstNet technical and eligibility requirements for the network
- Transition towards Next Generation 911 (NG911) capabilities
- Require or encourage compliance with NG911 standards for grant funded projects
- Support standards that allow for alerts and warnings across different systems
- Secure and protect equipment, information, and capabilities from physical and virtual threats
- Acquire, sustain, and maintain Common Alerting Protocol compliant software that meets IPAWS system requirements
- Sustain and ensure critical communication systems connectivity and resiliency, including backup solutions, among key government leadership, internal elements, other supporting organizations, and the public under all conditions
- Support standards and best practices that enhance survivability and resilience to electromagnetic effects
- Ensure all communications systems and networks are traced from end-to-end to identify all Single Points of Failure, including redundancy at critical infrastructure facilities, and:
  - Sustain availability of backup systems (e.g., backup power, portable repeaters, satellite phones, High Frequency [HF] radios)
  - Ensure diversity of network element components and routing
  - Plan for geographic separation of primary and alternate transmission media
  - Maintain spares for designated critical communication systems
  - Work with commercial suppliers to remediate Single Points of Failure
  - Maintain communications capabilities to ensure their readiness when needed

\textsuperscript{15} NIST released the \textit{Framework for Improving Critical Infrastructure Cybersecurity}, which is a voluntary risk-based approach to cybersecurity that uses industry guidelines to help organizations manage cyber risks to critical infrastructure. For more information, see: \url{https://www.nist.gov/cyberframework}.

\textsuperscript{16} For more information on P25 requirements, see: \url{http://www.project25.org/}. For a list of P25 CAP approved equipment, see: \url{https://www.dhs.gov/science-and-technology/approved-grant-eligible-equipment}.

\textsuperscript{17} Applicants interested in broadband investments should consult with the FirstNet Authority to ensure investments meet all technical requirements to operate on the network. Please refer to the Authority’s contact information at: \url{https://firstnet.gov/}.
3. Before Applying

Before applying for federal funds for emergency communications, applicants should:

- Review the NECP and SCIP
- Coordinate with statewide emergency communications leaders
- Recognize changes in the emergency communications ecosystem
- Understand federal grant requirements and restrictions

3.1 Review the NECP and SCIP

Grant applicants should read the NECP to understand the national emergency communications strategy, and to ensure proposed projects support national goals and objectives. Similarly, grant recipients should review their state or territory’s SCIP to ensure proposals support statewide plans to improve communications across all emergency communications systems and capabilities.

In addition to developing and updating SCIPs, CISA requests each state and territory submit the SCIP Annual Snapshot (via SCIP@hq.dhs.gov) to document progress the state or territory has made towards implementing its SCIP. The SCIP Annual Snapshot includes information on accomplishments, interoperability gaps, as well as current and future strategic initiatives for improving interoperability. Grant applicants should describe in applications how projects align to needs identified in the SCIP or other applicable plans.

3.2 Coordinate with Statewide Emergency Communications Leaders

To ensure projects are compatible, interoperable, and support statewide plans and strategies, grant applicants should consult the appropriate statewide leaders or entities prior to developing projects for funding. Some federal programs require or encourage coordination of grant submissions with the SWIC and other statewide leaders (e.g., State Emergency Management Agency Director, 911 Administrator, Homeland Security Director), as well as require applicants to attach a letter of project support from these leaders. Grant applicants should also consult the SIGB or SIEC, as they serve as the primary steering group for the statewide interoperability strategy. Additionally, grant recipients should consult any subject matter experts serving on governance bodies such as broadband experts, chief information officers, representatives from utilities, or legal and financial experts when developing proposals.

3.3 Recognize Changes in the Emergency Communications Ecosystem

Grant recipients should understand the more complex and interdependent ecosystem that has emerged due to evolving technologies, risks, stakeholders, and policies impacting many facets of emergency communications including planning, operations, equipment, and training. Key issues impacting federal emergency communications grants include developments in advanced technologies, national policies and laws, spectrum issues, and the reduction and streamlining of grant programs.

Developments in Advanced Technologies

Traditionally, LMR systems were the primary capabilities the public safety community used to achieve mission critical voice communications in the field. To augment their LMR capabilities, emergency

---

18 The term “advanced technologies” includes, but is not limited to, the use of emerging technologies to provide advanced interoperability solutions; solutions that allow the use of commercial services, where appropriate, to support interoperable communications; IP-based technologies; use of common advanced encryption options that allow for secure and vital transmissions, while maintaining interoperability; use of standards-based technologies to provide voice and data services that meet wireless public safety service quality; solutions that have an open
response agencies are increasingly using commercial wireless broadband services and, in some cases, procuring dedicated broadband networks for mission critical data communications. IP-enabled networks stand to transform how public officials will communicate by providing unparalleled connectivity and bandwidth that enhance situational awareness and information sharing. Communication network modernization is also occurring with the migration of the Nation’s 911 infrastructure to NG911, an IP-based model that will enable increased resilience and redundancy in call routing, as well as the transmission of both voice and data (e.g., texts, images, geospatial location, video) to flow seamlessly from the public, through the 911 network and eventually, directly to first responders. Also, the deployment of a nationwide public alerting system is using traditional media, such as broadcast and cable, as well as IP-based technologies to transmit alerts to mobile phones and other devices.

Public safety IT systems include sensitive data, such as law enforcement information and electronic medical records, which create new security considerations including storage, access, and authentication. While electronic access to this data enables more effective response operations, it also poses risks including system failures, lack of user or server connection, and hostile hackers. As the community adopts new technologies and applications, then it too must increase understanding and planning for the security risks associated with the open architecture and vast complexity of IP-based technologies and services.

To meet these challenges, a multifaceted cybersecurity approach is needed to ensure the confidentiality and the integrity of the communication system and sensitive data. For example, comprehensive cyber training and education will be required on the proper use and security of devices, phishing, malware, and other potential threats. In addition, planning must match user needs against bandwidth requirements and the options for network resiliency. Assessments of cyber risks and strategies to mitigate vulnerabilities must be conducted before the deployment of IP-based networks occurs to ensure mission requirements can be met securely and reliably from the outset.

The convergence of technologies and risks in this evolving ecosystem shows the importance of ongoing planning for emergency communications. Grant recipients and their respective governance and leadership must consider all components that support LMR, broadband, cyber, and IP-based technologies as they update strategic plans and common operational protocols that ensure the operability, interoperability, and continuity of emergency communications systems. Additionally, grant recipients should prioritize maintaining LMR systems and other emergency communications capabilities gained in recent years as they gradually adopt and deploy IP-based technologies and services. The public safety community continues to rely on LMR as its primary source to achieve mission critical voice communications in the field.

National Policies and Laws

In addition to technological developments, the Nation is evolving its approach to preparing for and responding to incidents through the National Preparedness Goal, which promotes a shared responsibility across all levels of government, private and nonprofit sectors, and the general public. Applicable plans, laws, and policies include the NECP, the Middle Class Tax Relief and Job Creation Act of 2012 (Public Law 112-96; 47 U.S.C. 1401 et seq.), the IPAWS Modernization Act of 2015, and the Presidential Policy Directive–8 (PPD–8):

- **National Emergency Communications Plan.** Released in November 2014 and an update planned for 2019, the focus of this Plan is to ensure strategies, resource decisions, and investments for emergency communications keep pace with the evolving environment, and the emergency response community is collectively driving toward a common end-state for communications. The NECP interface to enable the efficient transfer of voice, data, and video signals; and investments in these technologies, such as NG911 and Bridging System Interface.
provides information and guidance to those that plan for, coordinate, invest in, and use communications to support response and recovery operations.19

Grant recipients should read the NECP to understand the national emergency communications strategy, and to ensure proposed investments support the goals, objectives, and recommendations of the Plan. In addition, grant applicants are encouraged to review NECP supplemental materials such as assessments, annual progress reports, and implementation documents. Additionally, grant applicants should work with the SWIC to ensure alignment of the SCIP and other emergency communications plans to the NECP.

- **Middle Class Tax Relief and Job Creation Act of 2012.** Signed into law on February 22, 2012, the Act established the FirstNet Authority, an independent authority within NTIA, and directed it to ensure the establishment of the NPSBN.20 The Act reallocated and designated 700 MHz D Block spectrum for public safety use to the FirstNet Authority.21 The Authority engaged in comprehensive outreach and consultation with public safety entities in federal, state, local, tribal, and territory jurisdictions to plan for the network. The Authority actively sought input from tribal, state, and territorial governments; paid and volunteer first responders; industry; and other stakeholders on what the network should offer, how it should function, and how to meet the technical objectives of the network. The resulting FirstNet network solution will be based on a single, national network architecture that evolves with technological advances and consists of a physically separate evolved packet core (EPC) network and a radio access network (RAN).22

The Authority competes as a services-based business where eligible users choose to subscribe to a level of service that aligns with their mission needs. The principle responsibilities of federal, state, local, tribal, and territorial public safety entities will be the acquisition of authorized and compatible devices and applications that operate on the network and determination of connectivity of proprietary databases that could support public safety operations. Infrastructure and maintenance costs of the network EPC, RAN, and National Disaster Recovery assets (e.g., Cell on Wheels [COWs], Cell on Light Trucks [COLTs], Satellite COLTs, Flying Cell on Wings) will be borne by the FirstNet Authority.

Per the Act, the FirstNet Authority delivered final state plans to governors to make an opt-in/opt-out decision. All 50 states, 5 territories, and the District of Columbia chose the FirstNet solution and will have a FirstNet network presence consistent with their state plan.

At this time, only after receiving further guidance from the FirstNet Authority on the technical requirements of and compatibility with the network should grant recipients acquire long-term evolution (LTE) devices or network equipment. Additional outreach and planning activities (e.g., community engagement and education, documenting user needs) that support the arrival of public safety broadband technologies should be done in consultation with the FirstNet Authority.

Applicants interested in investing federal funds in broadband-related projects should consult with the FirstNet Authority and the federal granting agency to understand all requirements impacting broadband investments. The FirstNet Authority, with their network partner, is the sole nationwide licensee for Band 14 spectrum and does not anticipate entering into any other spectrum agreements. Applicants should work closely with the SWIC, statewide emergency

19 For more information on the NECP, see: [https://www.dhs.gov/cisa/national-emergency-communications-plan](https://www.dhs.gov/cisa/national-emergency-communications-plan).
communications leaders, and the federal granting agency to ensure projects remain in compliance with programmatic and technical requirements.

In addition to the duties required by the FirstNet Authority, the Middle Class Tax Relief and Job Creation Act of 2012 also charged NTIA with establishing a grant program, the State and Local Implementation Grant Program (SLIGP), to assist state, regional, tribal, and local jurisdictions with planning activities to support the implementation of the NPSBN. As required by the Act, NTIA consulted with FirstNet in establishing the programmatic requirements for SLIGP. NTIA awarded $116.5 million in grant funds to 54 state and territorial recipients between July 2013 and June 2014. The first round of grants (SLIGP 1.0) expired February 28, 2018. Many recipients expended their grant funds at a lower rate of spending than the NTIA anticipated. NTIA used the unspent funds from SLIGP 1.0 to award a new grant program, SLIGP 2.0, in March 2018. SLIGP 2.0 grants totaling $33.3 million were awarded to 46 states and territories for planning activities to support implementation of the NPSBN. The SLIGP application period has closed and current awards are scheduled to end in calendar year 2020.

Additionally, the Act provides the NHTSA and NTIA with $115 million for grants to improve 911 services. Grant applicants should continue to monitor current federal actions affecting broadband and 911 programs funded through the Act.  

- **IPAWS Modernization Act of 2015.** Signed into law in April 2016, Public Law 114-143 calls for the modernization of IPAWS to ensure the President can communicate under all conditions, establishes a Subcommittee to the National Advisory Council composed of IPAWS stakeholders to expand collaboration and recommend improvements to the system, and requires annual performance reports. The Act includes 19 additional system and implementation requirements, which the program is currently evaluating and estimating the resources necessary to fulfill to the extent feasible.

- **Presidential Policy Directive–8.** Signed by the President in March 2011, PPD–8, *National Preparedness*, is aimed at strengthening the security and resilience of the United States through systematic preparation for the threats that pose the greatest risk to the security of the Nation. It consists of four main components: *National Preparedness Goal*; National Preparedness System; *National Preparedness Report*; and the Campaign to Build and Sustain Preparedness. The directive emphasizes national preparedness is the shared responsibility of the whole community.  

As a result, many grants that fund emergency communications now require grant applicants to engage the whole community in planning. FY 2019 federal grant programs will require applicants to demonstrate how a whole community approach to project planning was used, and explain how core capabilities were improved. Applicants are encouraged to engage their community early in project development to ensure they can provide evidence of community involvement in applications, which in turn improves preparedness and response.

**Spectrum Issues**

The FCC authorizes state, local, and some tribal public safety entities to use specific spectrum bands to operate emergency communications systems. By statute, the FirstNet Authority holds the FCC license for the 700 MHz public safety broadband spectrum to deploy the network. Grant applicants seeking federal funds for emergency communications projects should be aware of initiatives and actions affecting

---

23 For more information on the 911 Grant Program, visit: [http://www.911.gov/project_911grantprogram.html](http://www.911.gov/project_911grantprogram.html).

spectrum use for public safety entities. Applicants should review the following spectrum issues, confirm their proposed projects are consistent with regulatory requirements and initiatives, and consult the appropriate coordinator (e.g., Frequency Coordinator, SWIC), the FCC, and/or the FirstNet Authority early in the project development process to determine whether the grant applicant will have authority to operate in the desired spectrum, once complete. Key spectrum-related issues are described below:

- **Ultra-High Frequency (UHF)/Very High Frequency (VHF) Narrowbanding.** The FCC mandated all non-federal LMR licensees operating between 150 and 512 MHz and using 25 kilohertz (kHz) bandwidth voice channels migrate to 12.5 kHz bandwidth or equivalent efficiency by January 1, 2013. Grant applicants should ensure existing LMR systems are compliant with these narrowbanding requirements and consult with the SWIC and the FCC on any non-compliance issues to avoid admonishment, monetary fines, or loss of license. Grant applicants that have not complied with the FCC narrowband mandate may face limitations on their eligibility for federal funding.

- **800 MHz Reconfiguration (Rebanding).** In 2004, the FCC ordered the reconfiguration of portions of the 800 MHz band to separate public safety systems from commercial cellular networks and thereby reduce harmful interferences. 800 MHz rebanding is complete in most areas of the U.S., but remains to be completed in the U.S.-Mexico border region. Public safety entities contemplating communication projects in areas still undergoing rebanding should consult their SWIC, the FCC, and the 800 MHz Transition Administrator, which is responsible for overseeing the rebanding process and providing technical assistance to affected licensees.

- **T-Band Migration.** The Middle Class Tax Relief and Job Creation Act of 2012 authorized the future auction of the 470–512 MHz ultra-high frequency band, referred to as the T-Band. Several large urban areas use the T-Band for public safety communications. The Act requires the FCC to commence the auction process by 2021 and requires T-Band public safety licensees to relocate from the T-Band to other, unspecified spectrum, two years after the completion of the auction of this spectrum. The Act charges NTIA with administration of a grant program for relocation out of auction proceeds. T-Band licensees are currently eligible to relocate to public safety channels in the VHF (150-174 MHz), UHF (450-470 MHz), 700 MHz, and 800 MHz bands, to the extent channels in these bands are available, and the Commission has prioritized availability of certain channels in these bands for T-Band licensees. Spectrum may also be available through leasing, or partitioning/disaggregation of other narrowband public safety or commercial spectrum. Grant applicants seeking funding for relocation of T-Band systems should consult the FCC, SWIC, and a frequency coordinator early in the project development process to ensure the project supports statewide plans for improving emergency communications, and is planned in the appropriate spectrum.

---

28 For more information on 800 MHz reconfiguration, see: [http://www.800ta.org/](http://www.800ta.org/).

29 T-Band markets include: Boston (MA), Chicago (IL), Dallas/Ft. Worth (TX), Houston (TX), Los Angeles (CA), Miami (FL), New York City (NY), Philadelphia (PA), Pittsburgh (PA), San Francisco/Oakland (CA), Washington DC/Maryland/Virginia.

30 Grant applicants can contact the FCC Public Safety and Homeland Security Bureau at: [pshsbinfo@fcc.gov](mailto:pshsbinfo@fcc.gov).

• **700 MHz Public Safety Broadband Spectrum.** The Middle Class Tax Relief and Job Creation Act of 2012 authorized the establishment of the NPSBN, dedicated a block of 700 MHz spectrum for this purpose, and named the FirstNet Authority as the single licensee for the spectrum block. Incumbents operating in this band had to migrate from the band to clear the spectrum for NPSBN use by August 31, 2017. The FirstNet Authority established a grant program to support such relocation by qualified licensees. The Authority provided relocation grant awards to ten narrowband incumbents totaling more than $27.3 million. While a majority of incumbents cleared the spectrum by the deadline, several incumbents were provided no-cost extensions. These incumbents completed their work in clearing the spectrum bringing the program to a close.

In general, grant applicants should consult with the regulatory agency and appropriate state-level points of contact when developing public safety projects to ensure entities are in compliance with federal spectrum initiatives and regulations, and projects will have authority to operate in the designated spectrum. To assist state, local, tribal, and territorial levels of government, many grants that fund interoperable communications equipment allow grant funds to be used for spectrum-related activities, including:

- Identification, assessment, coordination, and licensing of new spectrum resources
- Development and execution of spectrum migration plans
- Assessment of current communications assets, services, and capabilities
- Training associated with systems migration to new spectrum allocations
- Replacement of non-compliant communications equipment and services
- Acquiring/upgrading tower sites and facilities needed to comply with spectrum migration
- Reprogramming existing equipment to comply with spectrum migration

**Reduction and Streamlining of Grants**

The elimination and consolidation of grants funding emergency communications over the past several years have increased competition for funding and necessitated increased planning among jurisdictions and disciplines. Emergency communications leaders and agencies are strongly encouraged to work with other jurisdictions and disciplines to coordinate resources and projects and to avoid duplication of activities. Additionally, when developing funding proposals, grant applicants are advised to work with state-level planning offices to incorporate emergency communications needs into statewide plans and to ensure communications projects are prioritized by states and territories. Applicants are encouraged to:

- Coordinate projects with the SWIC, neighboring jurisdictions, and multiple agencies
- Develop regional, multi-jurisdictional, multi-disciplinary, and cross-border projects to not only promote greater interoperability across agencies, but also to pool grant resources, facilitate asset-sharing, and eliminate duplicate purchases

---

32 The public safety broadband spectrum band is 763-768 MHz and 793-798 MHz.
33 Any incumbents that wished to remain on the FirstNet spectrum after August 31, 2017, had to obtain the FirstNet Authority’s consent to do so.
34 Contact the FCC’s Public Safety Homeland Security Bureau at pshsbinfo@fcc.gov and the FirstNet Authority at outreach@firstnet.gov.
35 Generally, federal licensing fees are not allowable under most federal grants; however, applicants should not anticipate having such expenses as public safety entities are exempt from FCC filing fees. For more information, see: https://transition.fcc.gov/fees/.
36 Some federal grants do not allow construction or ground-disturbing activities. Consult the grant officer on these activities.
37 Applicants should work with SWICs and the FCC to ensure projects do not interfere with the 800 MHz rebanding effort occurring along the U.S.-Canada and U.S.-Mexico borders. For more information on the rebanding process, see: https://transition.fcc.gov/pshs/public-safety-spectrum/800-MHz/. Federal funding may not be allocated to international entities, unless authorized by law, and placement of federally-funded equipment on international
• Leverage assessment data to develop strong statements of need that can be shared with state leaders responsible for prioritizing projects for funding.

• Identify additional sources of funding for emergency communications improvements.

### 3.4 Understand Federal Grant Requirements and Restrictions

#### Federal Grant Requirements

Emergency communications grants are administered by numerous federal agencies in accordance with various statutory, programmatic, and departmental requirements. Grant applicants are encouraged to carefully review grant guidance to ensure applications meet all grant requirements, including:

- Program goals
- Eligibility requirements
- Application requirements (e.g., due dates, submission dates, matching requirements)
- Allowable costs and restrictions on allowable costs
- Technical standards preferred, required, or allowed under each program, if applicable
- Reporting requirements

Additionally, recipients should be aware of common requirements for grants funding emergency communications, including:

- **Environmental Planning and Historic Preservation (EHP) Compliance.** Recipients must comply with all applicable EHP laws, regulations, Executive Orders, and agency guidance. Recipients are strongly encouraged to discuss projects with federal grant program officers to understand EHP restrictions, requirements, and review processes prior to starting the project.

- **NIMS.** Homeland Security Presidential Directive 5 (HSPD-5), *Management of Domestic Incidents*, requires the adoption of NIMS to strengthen and standardize preparedness response, and to receive preparedness grant funding. State, local, tribal, and territorial recipients should ensure that they meet, or are working to meet, the most recent NIMS implementation and reporting requirements as described in the applicable Notice of Funding Opportunity and NIMS Implementation Objectives published by FEMA.

- **Stakeholder Preparedness Review (SPR) Submittal.** The Stakeholder Preparedness Review replaces the State Preparedness Report. Section 652(c) of the Post-Katrina Emergency Management Reform Act of 2006 (Public Law 109-295), 6 U.S.C. §752(c), requires any state that receives federal preparedness assistance administered by DHS to submit an SPR to FEMA. The SPR is a self-

---

38 Applicants are encouraged to use AARs and similar assessments to demonstrate where there are gaps in emergency communications, and to appeal to state-level leaders for funding to address those gaps.

39 For additional sources of funding, see the List of Federal Financial Assistance Programs Funding for Emergency Communications posted to the SAFECOM website at: [https://www.dhs.gov/safecom/funding](https://www.dhs.gov/safecom/funding).

40 While these are common requirements that affect many emergency communications grants, they may not apply to all grants; therefore, applicants should consult their grant guidance and grant officer for specific questions on grant requirements.

41 The NIMS Implementation Objectives reflect the concepts and principles contained in NIMS and clarify the NIMS implementation requirements in FEMA preparedness grant Notices of Funding Opportunity. As recipients and subrecipients of federal preparedness (non-disaster) grant awards, jurisdictions and organizations must achieve, or be actively working to achieve, all of the NIMS Implementation Objectives. Additional NIMS implementation guidance can be found at: [https://www.fema.gov/implementation-guidance-and-reporting](https://www.fema.gov/implementation-guidance-and-reporting).
assessment of a jurisdiction’s current capability levels against the targets identified in the Threat and Hazard Identification and Risk Assessment (THIRA). Jurisdictions use the SPR to estimate their current preparedness capabilities and compare those to their THIRA results to identify gaps. They also use the SPR to identify potential approaches for addressing those capability gaps.

- **Threat and Hazard Identification and Risk Assessment.** Beginning in 2019, DHS/FEMA will require Homeland Security Grant Program (State Homeland Security Program and Urban Area Security Initiative), Tribal Homeland Security Grant Program, and Emergency Management Performance Grant Program recipients to complete a THIRA report every three years (previously, a THIRA was required annually). Grant recipients will also be required to submit an SPR annually. Communities use the THIRA process to better understand their risks and determine the level of capabilities needed to address those risks. Through the THIRA process, communities set goals for building and sustaining their capabilities. It results in whole community-informed capability targets and resource requirements necessary to address anticipated and unanticipated risks.42

Developing and updating an effective THIRA/SPR requires active involvement from the whole community. This can result in more complete, accurate, and actionable assessments and planning efforts. Therefore, recipients should actively engage a wide variety of stakeholders in the THIRA/SPR process. Emergency communications subject matter experts should be involved in the THIRA/SPR process and provide input as appropriate, including but not exclusive to the potential impacts of threats and hazards on emergency communications. For additional information, refer to each grant program’s FY 2019 Notice of Funding Opportunity for reporting requirements, including the THIRA/SPR.

- **Authority to Operate.** In establishing requirements for the NPSBN and providing 20 MHz of the upper 700 MHz spectrum to the FirstNet Authority, Congress directed the Authority to ensure the building, operation, and maintenance of a wireless, nationwide interoperable public safety broadband network with a single architecture to ensure interoperability for public safety entities. The Authority holds the single nationwide FCC license for the combined public safety broadband spectrum (763-768 MHz and 793-798 MHz) and D Block spectrum (758-763 MHz and 788-793 MHz), commonly referred to as Band 14. The FirstNet Authority license also incorporates two one-MHz guard bands at 769 and 799 MHz. Recipients that have not entered into a spectrum management lease agreement (SMLA) do not have authority to operate in the designated FirstNet spectrum. Accordingly, recipients that do not have access to the designated FirstNet spectrum may not use federal financial assistance in acquisition or deployment of broadband projects until such time as they have received the necessary authority to operate in the designated FirstNet spectrum. Recipients that have authority to operate may submit projects for funding provided that the request is consistent with the terms and conditions of their SMLA with the FirstNet Authority. Recipients should notify the Authority prior to submitting a funding application and be aware that their project will be subject to federal review to ensure proposed projects support the Authority’s efforts to deploy the network.

- **Reporting.** Federal agencies are improving how they demonstrate impact and effectiveness of federal grant programs. As a result, recipients may be required to report project-level information, performance measurement data, detailed financial reports, and progress reports. Recipients are encouraged to use existing documentation and data (e.g., SCIPs, AARs,

---

assessments) to measure performance and demonstrate how gaps in capabilities will be/were addressed through federal grant funding. Recipients are strongly encouraged to:

- Develop performance measures at the start of the grant
- Include interval performance measures and milestones to gauge project progress
- Track performance and report the impact of funds on emergency communications
- Include metrics on improvements in interval and final grant reports

Recipients should ensure all grant requirements are met and that they can implement the project as proposed and within the grant period of performance; properly manage grant funding; fulfill grant reporting requirements; and comply with federal grant restrictions.

Federal Grant Restrictions

Recipients should be aware of common restrictions on federal grant funding and should consult the grant officer with any questions, particularly as requirements vary by program.

- **Commingling or Duplication of Funds.** Since multiple agencies are involved in communications projects, projects are often funded with multiple grant programs, creating a risk of commingling and duplication. Recipients must ensure federal funds are used for purposes that were proposed and approved, and have financial systems in place to properly manage grant funds. Recipients cannot commingle federal sources of funding. The accounting systems of all recipients and sub-recipients must ensure federal funds are not commingled with funds from other awards or federal agencies.

- **Cost Sharing/Matching Funds.** Recipients must meet all matching requirements prescribed by the grant. If matching funds are required, grant recipients must provide matching funds or in-kind goods and services that must be:
  - Allowable under the program and associated with the investment
  - Applied only to one federal grant program
  - Valued at a cost that is verifiable and reasonable
  - Contributed from non-federal sources
  - Treated as part of the grant budget
  - Documented the same way as federal funds in a formal accounting system

- **Funding and Sustaining Personnel.** In general, the use of federal grant funding to pay for staff regular time is considered personnel and may be allowable. Recipients are encouraged to refer to the applicable grant program guidance and develop a plan to sustain critical communications positions in the event federal funds are not available to support the position in future years. For more information on personnel, refer to Section 4. Eligible Activities – Personnel.

- **Supplanting.** Most grant funds cannot supplant (or replace) funds previously funded or budgeted for the same purpose. Most federal grants funding emergency communications restrict recipients from hiring personnel for the purposes of fulfilling traditional public safety duties or to supplant traditional public safety positions and responsibilities. Review applicable grant program guidance for specific rules on supplanting.
4. Eligible Activities

The following section details eligible emergency communications activities commonly funded by federal grants, including Personnel and the four common cost categories: Planning and Organization, Training, Exercises, and Equipment. Grant applicants seeking to improve interoperable emergency communications are encouraged to allocate grant funding to these activities but must consult the specific grant guidance for allowable costs.

The intent of this section is to raise awareness as to the types of costs that can be covered under most federal grants funding emergency communications. However, applicants should note all activities listed in this section may not be eligible for funding under all grant programs. Applicants should read each grant guidance and related information carefully to ensure activities proposed are eligible under the program before developing or submitting applications.

4.1 Personnel

Many federal grants allow recipients to hire full- or part-time staff, contractor staff, or consultants to assist with emergency communications planning, training, and exercise activities. Allocating funding toward personnel helps ensure grants and grant-funded projects are managed, state-level planning meetings are attended, emergency communications needs are represented, and plans are completed. Personnel can be hired to develop and conduct training and exercises, and to complete AARs.

Eligible Personnel Costs

- **Personnel to assist with planning.** Full- or part-time staff, contractors, or consultants may be hired to support emergency communications planning activities, including:
  - Statewide, local, tribal, territorial, or regional interoperability coordinator(s)
  - Project manager(s)
  - Program director(s)
  - Emergency communications specialists (e.g., frequency planners, radio technicians, cybersecurity)

- **Personnel to assist with training.** Full- or part-time staff, contractors, or consultants may be hired to support emergency communications training activities, including personnel who can:
  - Assess training needs
  - Develop training curriculum
  - Train the trainers
  - Train emergency responders
  - Promote cross-training and continuous training to address changes in the workforce
  - Ensure personnel are proficient in using existing and new technologies
  - Develop exercises to test training
  - Support training conferences
  - Develop and implement a curriculum covering technical issues raised by broadband and other advanced technologies
  - Address continuity of operations planning requirements

---

43 The general cost categories for grants include: Planning, Organization, Equipment, Training, and Exercises (POETE). Some grants do not provide a category for Organizational costs, but allow organizational costs to be included under the Planning cost category. Applicants should be aware that emergency communications personnel, planning, and organizational costs are often allowable under the Planning cost category for grants.

44 Typically, the use of federal grant funding to pay for staff or contractor regular time is considered personnel.
FY 2019 SAFECOM Guidance on Emergency Communications Grants

- Serve as subject matter experts (e.g., environmental engineers, grant administrators, financial analysts, accountants, attorneys)

**Personnel to assist with exercises.** Full- or part-time staff, contractors, or consultants may be hired to support exercises. This includes personnel that will:
  - Assess needs
  - Plan and conduct exercises in accordance with NIMS and the Homeland Security Exercise and Evaluation Program (HSEEP)
  - Implement NECP goal measurements and assessments
  - Lead After Action Conferences and prepare AARs

**Additional Requirements and Recommendations for Personnel Activities**

Grant recipients should be aware of common restrictions on federal grant funding for emergency communications personnel.

- **Sustaining Grant-Funded Positions.** Recipients should ensure funding for critical communications positions is sustained after the grant period of performance has ended and core capabilities are maintained.

- **Overtime.** Some federal grants permit the use of funds for overtime related to training. These expenses are limited to additional costs that result from personnel working more than 40 hours per week as a direct result of their attendance at approved activities (e.g., emergency communications training and exercises).

- **Backfill-related Overtime.** Some federal grants allow funds to be used for backfill-related overtime. These expenses are limited to costs of personnel who work overtime to perform duties of other personnel who are temporarily assigned to grant-funded activities (e.g., to attend approved, grant-funded emergency communications training or exercises). These costs are calculated by subtracting the non-overtime compensation, including fringe benefits of the temporarily assigned personnel, from the total costs for backfilling the position. Recipients should ensure grant funds can be used for overtime and consult their grant officer to correctly calculate overtime costs.

**4.2 Planning and Organization**

Allocating grant funding for planning helps entities identify and prioritize needs, define capabilities, update preparedness strategies, refine communications plans, identify where resources are needed most, and deliver preparedness programs across multiple jurisdictions, disciplines, and levels of government. Grant recipients are strongly encouraged to assess needs before planning projects, and to carefully plan projects before purchasing equipment.

**Eligible Planning and Organization Costs**

- **Development or enhancement of interoperable emergency communications plans.** Grant funds may be used to develop or enhance interoperable communications plans and align plans to the strategic goals, objectives, and recommendations set forth in the NECP. Examples of emergency communications plans include:
  - Plans to implement and measure the NECP
  - SCIPs
  - TICPs, FEMA RECPs, or other tactical or regional communications plans
  - Disaster emergency communications plans
Communications system life cycle planning, including migration planning and use of the 2018 Emergency Communications System Lifecycle Planning Guide and Life Cycle Planning Tool.

- Plans for narrowband conversion and compliance
- Plans for broadband integration with broader communications capabilities
- Plans for 800 MHz rebanding
- Plans for relocating existing systems operating in the T-Band
- Stakeholder statements of need and concept of operations (CONOPS)
- As-is and proposed enterprise architectures
- System engineering requirements
- Acquisition planning for the procurement of systems or equipment
- Planning for continuity of communications, including backup solutions, if primary systems or equipment fail (e.g., contingency and strategic planning)
- Planning for training and exercises
- Identifying security measures for communications networks and systems
- Planning activities for the transition of 911 to NG911

- **Engagement of federal, state, local, tribal, territorial, private, and public sector entities in planning.** Many federal grants require engagement of the whole community in planning to adequately assess and address needs, and to implement the National Preparedness System. The National Preparedness Goal and the National Preparedness System concepts, as described in PPD–8, recognize the development and sustainment of core capabilities are not exclusive to any single level of government or organization, but rather require combined efforts of the whole community. As a result, the following activities are often supported through federal grants funding emergency communications:
  - Conducting conferences and workshops to receive input on plans
  - Meeting expenses related to planning
  - Public education and outreach on planning
  - Travel and supplies related to planning or coordination meetings
  - Attending planning or educational meetings on emergency communications

- **Establishment or enhancement of interoperability governing bodies.** Strong governance structures and leadership are essential to effective decision-making, coordination, planning, and managing of emergency communications initiatives. Grant funds may be used to establish, update, or enhance statewide, regional (e.g., multi-state, multi-urban area), or local governing bodies. Eligible activities may include:
  - Developing Memoranda of Understanding (MOU) and Memoranda of Agreement (MOA) to facilitate participation in planning and governance activities
  - Meeting or workshop expenses associated with receiving input on plans or supporting a funded activity
  - Increasing participation in governing bodies through public education and outreach
  - Travel and supplies for governing body meetings
  - Attending planning or educational meetings on emergency communications
  - Developing SOPs or templates to provide access to and use of resources
  - Continued broadband planning and coordination efforts

---

45 For guidance on emergency communications system lifecycle planning, see: [https://www.dhs.gov/publication/funding-documents](https://www.dhs.gov/publication/funding-documents).

46 Core capabilities include Prevention, Protection, Mitigation, Response, and Recovery, and are further defined in the National Preparedness Goal on the FEMA website at: [https://www.fema.gov/national-preparedness-goal](https://www.fema.gov/national-preparedness-goal).
Ensuring coordination between traditional LMR governance programs and other decision-making offices, bodies, and individuals that oversee new technology deployments in states, territories, localities, and tribes

- **Development of emergency communications assessments and inventories.** Grant recipients are encouraged to allocate grant funding to planning activities, such as assessments of:
  - Technology capabilities, infrastructure, and equipment (e.g., updating the CASM NextGen Tool, creating fleet maps)
  - SOPs, coordination of interoperability channels, and regional response plans
  - Training and exercises
  - Narrowband compliance capabilities and system coverage analysis
  - Cost maintenance models for equipment and usage

- **Development or enhancement of interoperable emergency communications protocols.** Funds may be used to enhance multi-jurisdictional and multi-disciplinary common planning and operational protocols, including the development or update of:
  - SOPs, shared channels and talk groups, and the elimination of coded substitutions (i.e., developing and implementing common language protocols)
  - Partnership agreements, MOUs, and cross-border agreements
  - Plans to integrate SOPs across disciplines, jurisdictions, levels of government, and with private entities, as appropriate, and into mutual aid agreements
  - Response plans to specific disaster or emergency scenarios
  - Field guides and templates for field guides

- **Planning activities for emerging technologies.** Grant funds may be used to begin planning for broadband and other advanced technologies. Activities may include:
  - Defining user needs
  - Updating SCIPs to incorporate high-level goals and initiatives
  - Developing plans to optimize broadband use in support of public safety operations
  - Continued collection of broadband usage data, use cases, and needs analyses
  - Developing agreed-upon standards for the use of common applications to promote enhanced level of situational awareness
  - Preliminary planning for advanced technologies (e.g., alerts and warnings, NG911)
  - Conducting assessments of cyber risks and strategies to mitigate vulnerabilities before the deployment of IP-based networks
  - Implementing identity, credential, and access management (ICAM) solutions to address growing data management, interoperability, and cybersecurity challenges, with consideration for federated solutions, such as the Trustmark Framework

- **Use of priority service programs.** Grant funds may be used to assist priority service planning and engineering, and to facilitate participation in federal priority service programs, including:
  - Telecommunications Service Priority (TSP)
  - Government Emergency Telecommunications Service (GETS)
  - Wireless Priority Service (WPS)

---

47 For more information on ICAM and the Trustmark Framework, see: https://www.dhs.gov/safecom/icam-resources.
48 For more information on priority services, see: https://www.dhs.gov/gets.
FY 2019 SAFECOM Guidance on Emergency Communications Grants

- **Use of notifications and alerts and warning.** Grant funds may be used to connect with national-level communications systems, including the IPAWS, 49 which consists of:
  - Emergency Alert System
  - Wireless Emergency Alerts
  - IPAWS All-Hazards Information Feed
  - National Oceanic and Atmospheric Administration All Hazards Weather Radio/HazCollect

*Additional Requirements and Recommendations for Planning Activities*

Additional activities in support of federal planning initiatives include updating and submitting a SPR, THIRA, and SCIP, as well as demonstrating NIMS implementation.

4.3. **Training**

*Eligible Training Costs*

Recipients are encouraged to allocate federal grant funds to support emergency communications and incident response training. Communications-specific training activities should be incorporated into statewide training and exercise plans and be reflected in SCIPs. Recipients should continue to train on LMR systems as it is necessary to ensure public safety officials can achieve mission critical voice communications. As other communications technologies become integrated into response operations, the need for training becomes even more critical to ensure response personnel are maximizing the benefits that new capabilities provide. Training projects should be consistent with the NECP priorities and address gaps identified through SCIPs, TICPs, AARs, and other assessments. Training reinforces SOPs and proper equipment use by personnel. Grant recipients are strongly encouraged to include training in projects that involve new SOPs or equipment purchase.

- **Development, delivery, attendance, and evaluation of training.** 50 Grant funds may be used to plan, attend, and conduct communications-specific training workshops or meetings to include costs related to planning, meeting space, and other logistics costs, facilitation, travel, and training development. Communications-specific training should focus on:
  - Use of SOPs and other established operational protocols (e.g., common language)
  - NIMS/ICS training
  - COML, COMT, or ICS Communications Unit position training
  - Use of equipment and advanced data capabilities (e.g., voice, video, text)
  - Disaster preparedness
  - Peer-to-peer training
  - Regional (e.g., multi-state, multi-urban area) operations
  - Population of CASM NextGen Tool
  - Integration of broadband devices and applications into public safety operations
  - Cyber education on proper use and security of devices and applications, phishing, malware, other potential threats, and how to stay on guard against attacks
  - Evaluation and testing of public alert and warning procedures

- **Expenses related to training.** Many federal grants allow expenses related to training, including:
  - Travel

---

49 For more information on IPAWS, see: [https://www.fema.gov/ipaws-components](https://www.fema.gov/ipaws-components).

50 DHS training catalogs are available at: [https://www.dhs.gov/training-technical-assistance](https://www.dhs.gov/training-technical-assistance). The federal-sponsored and state-sponsored course catalogs can be found at: [https://www.firstrespondertraining.gov](https://www.firstrespondertraining.gov).
FY 2019 SAFECOM Guidance on Emergency Communications Grants

- Public education and outreach on training opportunities
- Supplies related to training (e.g., signs, badges, materials)

Additional Requirements and Recommendations for Training Activities

Recipients should target funding toward certified emergency communications activities, including:

- **NIMS Implementation.** State, local, tribal, and territorial entities must adopt NIMS as a condition of many federal grants. Given that implementation of NIMS requires certain training courses, recipients may target funding towards NIMS-compliant training.

- **Completion of Communications Unit Leader Training.** CISA, in partnership with FEMA, the Office for Interoperability and Compatibility, the National Integration Center, and practitioners from across the country, developed performance and training standards for the All-Hazards COML and formulated a curriculum and comprehensive All-Hazards COML Course. Recipients should target grant funding toward this training to improve on-site communications during emergencies, as well as satisfy NIMS training requirements.

### 4.4 Exercises

Exercises should be used to demonstrate and validate skills learned in training, and to identify gaps in capabilities. To the extent possible, exercises should include participants from multiple jurisdictions, disciplines, and levels of government and include emergency management, emergency medical services, law enforcement, interoperability coordinators, key information technology and cybersecurity personnel, public health officials, hospital officials, officials from colleges and universities, and other disciplines and private sector entities, as appropriate. Findings from exercises can be used to update programs to address gaps in emergency communications and emerging technologies, policies, and partners. Recipients are encouraged to increase awareness and availability of emergency communications exercise opportunities across all levels of government.

**Eligible Exercise Costs**

- **Design, development, execution, and evaluation of exercises.** Grant funds may be used to design, develop, conduct, and evaluate interoperable emergency communications exercises, including tabletop and functional exercises. Activities should focus on:
  - Use of new or established operational protocols, SOPs, and equipment
  - Regional (e.g., multi-state, multi-jurisdictional) participation
  - Integration of broadband services, devices, and applications into public safety operations

- **Expenses related to exercises.** Many federal grants allow for expenses related to exercises, including:
  - Meeting expenses for planning or conducting exercises
  - Public education and outreach
  - Travel and supplies

---

51 NIMS is a national framework for response that requires state, local, tribal, and territorial stakeholders to adopt a national ICS, complete certified training, and integrate the framework into state and local protocols. For more information on NIMS training, see: [http://www.fema.gov/national-incident-management-system](http://www.fema.gov/national-incident-management-system).
Additional Requirements and Recommendations for Exercise Activities

Recipients should target funding toward federal exercise initiatives, including participation in the communications components of the National Level Exercises and the following:

- **Management and execution of exercises in accordance with HSEEP.** The HSEEP library provides guidance for exercise design, development, conduct, and evaluation of exercises, as well as sample exercise materials.\(^{52}\)

- **Implementation of NIMS.** HSPD-5 requires all federal departments and agencies to adopt NIMS and use it in their individual incident management programs and activities, including all preparedness grants. DHS/FEMA recipients should review NIMS implementation criteria at: [https://www.fema.gov/national-incident-management-system](https://www.fema.gov/national-incident-management-system), and ensure all federally-funded training and exercise activities align with NIMS standards.

- **Coordination with state-level partners.** Communications-specific exercise activities should be coordinated with the SIGB or SIEC and SWIC to facilitate participation by appropriate entities (e.g., public safety, utilities, private sector, federal agencies) and resources (e.g., deployable assets).

4.5 Equipment

Emergency management and response providers must regularly maintain communications systems and equipment to ensure effective operation, as well as upgrade their systems when appropriate. Grant recipients are strongly encouraged to invest in standards-based equipment that supports statewide plans for improving emergency communications and interoperability among systems.

**Eligible Expenses\(^{53}\)**

- **Design, construction,\(^{54}\) implementation, enhancement, replacement, and maintenance of emergency communications systems and equipment, including:**
  - System engineering requirements
  - As-is and proposed enterprise architectures
  - Interoperability verification and validation test plans
  - System life cycle plans
  - Analysis and monitoring of cybersecurity risks
  - Migration to approved, open architecture, standards-based technologies
  - Integration of existing capabilities and advanced technologies (e.g., multi-band/multi-mode capable radio, Internet of Things devices, artificial intelligence, machine intelligence, and data science solutions)
  - Project management costs associated with systems and equipment
  - Procurement of technical assistance services for management, implementation, and maintenance of communications systems and equipment
  - Reimbursement of cellular and satellite user fees when used for backup communications

---

\(^{52}\) HSEEP resources are available at: [https://www.fema.gov/media-library/assets/documents/32326](https://www.fema.gov/media-library/assets/documents/32326).

\(^{53}\) While activities listed are generally allowable for traditional LMR investments, these activities may be restricted for broadband-related investments. Applicants are strongly encouraged to consult their federal granting agency before developing broadband proposals for funding to determine if those activities are allowable under the grant.

\(^{54}\) Not all federal grants permit construction-related activities. Consult the grant officer to determine whether construction activities are allowed. For grants that support construction-related activities, see applicable EHP requirements to select construction-related activities in this guidance.
FY 2019 SAFECOM Guidance on Emergency Communications Grants

- **Use of narrowband equipment.** The FCC mandated that all non-federal public safety land mobile licensees operating between 150-512 MHz and using 25 kHz channel bandwidth in their radio systems migrate to 12.5 kHz channels by January 1, 2013. Recipients should ensure existing systems are compliant and prioritize grant funding, where allowable, toward the following:
  - Replacing non-compliant equipment
  - Acquiring/upgrading additional tower sites to maintain coverage after conversion
  - Reprogramming existing equipment to operate in compliance with the FCC’s rule

- **Site upgrades for emergency communications systems.**
  - Installing or expanding battery backup, generators, or fuel systems
  - Evaluating existing shelter space for new communications equipment
  - Conducting tower loading analysis to determine feasibility of supporting new antennas and equipment
  - Analyzing site power and grounding systems to determine upgrades needed for additional communications equipment
  - Analyzing physical site security provisions for upgrades and enhancements (e.g., fences, lighting, alarms, cameras, shelter access hardening, protective measures)
  - Evaluating Public Safety Answering Points and other 911 infrastructure sites to determine hardware and software upgrades

- **Upgrading connectivity capabilities for emergency communications systems.**
  - Documenting existing wireline and wireless backhaul resources to determine used and excess capacity (e.g., connectivity type of either fiber, wireline, or cable at communications sites and existing public safety facilities)
  - Analyzing existing IP backbone to determine gaps in supporting high bandwidth public safety communications system access and applications
  - Planning and modeling network capacity to ensure backhaul links and aggregation points are appropriately provisioned
  - Upgrading existing backbone to support advanced capabilities (e.g., multi-protocol line switching)
  - Installing fiber optic connections and microwave connectivity to support enhanced communications and networking capabilities
  - Assessing and documenting usage of wireless communications capabilities including:
    - Mobile data systems facilitated through government-owned or commercial services
    - Applications
    - Devices or platforms supported
    - Speed/capacity
    - Accessible data
    - Redundancy and resiliency of systems or services
    - Cost of services and systems
    - Existing gaps in capabilities, connectivity, coverage, or application support

- **Purchase of:**
  - Standards-based interoperable communications equipment listed on the Authorized Equipment List (AEL)\textsuperscript{55}

\textsuperscript{55} For a list of equipment typically allowed by DHS/FEMA grants, see: [http://www.fema.gov/authorized-equipment-list](http://www.fema.gov/authorized-equipment-list).
o P25 compliant radio equipment listed on the P25 CAP Approved (Grant-Eligible) Equipment List\(^{56}\)
o Broadband user equipment, applications, and services, which are compliant with the NIST List of Certified Devices that meet appropriate protocols and standards for access to, use of, or compatibility with the NPSBN\(^{57}\)
o Equipment that will facilitate the transition of existing systems from the T-Band to authorized spectrum
o Ancillary equipment to facilitate planning and implementation of interoperable public safety grade communications systems and capabilities (e.g., radio frequency and network test equipment including handheld spectrum analyzers, cable testers)
o Alerts and warnings software that is compliant with the Common Alerting Protocol standards, user friendly, and meets IPAWS system requirements

**Additional Requirements and Recommendations for Equipment Purchases**

Recipients should anticipate additional requirements when purchasing equipment with federal grant funds, including:

- **Assignment of full-time Statewide Interoperability Coordinator.** DHS/FEMA requires all states and territories that use Homeland Security Grant Program funds to designate a full-time SWIC who has the authority and resources to actively improve interoperability with emergency management and response agencies across all levels of government. Responsibilities include establishing and maintaining statewide plans, policies, and procedures, and coordinating decisions on communications investments funded through federal grants. SWIC status information will be maintained by CISA and verified by FEMA through programmatic monitoring activities for DHS/FEMA grant recipients.

- **Coordination with statewide emergency communications leaders.** Recipients are strongly encouraged to coordinate with the SWIC, other emergency communications governance bodies and leadership, and appropriate state, local, tribal, and territorial partners to ensure consistency with statewide plans, and compatibility among existing and proposed emergency communications systems.

- **Compliance with technical standards.** DHS/FEMA recipients must ensure all grant-funded equipment complies with technical standards in the SAFECOM Guidance Appendix B, unless otherwise noted in a program’s grant guidance.\(^{58}\) Other federal grants require recipients to explain how their procurements will comply with applicable standards for LMR, IP-based systems, and alert and warning systems or provide compelling reasons for using non-standards-based solutions. Recipients should document all purchases and evidence of compliance with standards-based requirements.

- **Compliance with FCC Requirements.** Applicants are encouraged to consult with the FCC during application development to determine whether projects will be able to access the appropriate spectrum for planned operations or if a waiver is needed. Contact the FCC at [PSHSBinfo@fcc.gov](mailto:PSHSBinfo@fcc.gov).

- **Compliance with federal EHP laws and policies.** Recipients must ensure federally-funded projects comply with relevant EHP laws. Construction and installation of communications towers

---

\(^{56}\) For a list of P25 compliant radio equipment, see: [https://www.dhs.gov/science-and-technology/approved-grant-eligible-equipment](https://www.dhs.gov/science-and-technology/approved-grant-eligible-equipment).

\(^{57}\) For a list of NIST certified devices, see: [https://www.nist.gov/ctl/psrc/process-document-nist-list-certified-devices](https://www.nist.gov/ctl/psrc/process-document-nist-list-certified-devices).

\(^{58}\) Technical standards and requirements vary among federal grant programs (especially grants funding research and testing). Applicants should review grant guidance to ensure specific standards, terms, and conditions under the grant are met. DHS/FEMA grant recipients must adhere to compliance requirements specified in *SAFECOM Guidance* Appendix D.
and other ground-disturbing activities frequently requires EHP review. Each agency (and sometimes each program) has its own EHP compliance process. Recipients should discuss proposed construction-related activities with federal granting agencies before beginning work to determine whether proposed activities are allowed, and to determine if proposed activities are subject to EHP review.  

- **Adoption of new technologies.** Recipients are encouraged to migrate to approved, open architecture, standards-based systems and to integrate existing and other advanced technologies, applications, and software (e.g., multi-band/multi-mode capable radio) to expand disaster communications capabilities among emergency response providers.

- **Sustainment of current LMR capabilities.** Grant recipients are strongly encouraged to sustain current LMR capabilities for mission critical voice capabilities so that systems continue to deliver reliable communications.

- **Compliance with federal procurement requirements.** As a condition of funding, recipients agree to comply with federal procurement requirements. Recipients are responsible for ensuring open and competitive procurements, subject to the specific programmatic requirements of the grant, and applicable state or local procurement requirements. Recipients are required to have written procurement policies in place, are encouraged to follow the same policies and procedures it uses for procurement from its non-federal funds, and should include any clauses required by the Federal Government. The following are key procurement tenets when using federal funds:
  - Procurement transactions should be conducted to ensure open and free competition
  - Recipients/sub-recipients may not supplant, or replace, non-federal funds that are already budgeted or funded for a project
  - Recipients/sub-recipients should avoid non-competitive practices (e.g., contractors that developed the specifications for a project should be excluded from bidding)

- **Promotion of regional capabilities.** Grant recipients should coordinate and collaborate with agencies from neighboring states and regions to facilitate regional operable and interoperable solutions, including shared solutions.

- **Development of communications system life cycle plans.** Emergency responders must upgrade and maintain communications systems to ensure effective operation. Some programs require recipients to submit system life cycle plans for equipment purchased with federal grant funds. As a result, recipients should develop a system life cycle plan for any communications system.

- **Understanding of cost share.** Federal grants often require recipients to provide a percentage of total costs allocated to equipment. Federal funds cannot be matched with other federal funds, but can be matched through state, local, tribal, or territory cash and in-kind contributions. Match requirements are often waived for ancillary territories. Grant recipients should refer to the applicable grant guidance and consult the awarding agency with any questions regarding cost share requirements.

---

59 To learn more about federal EHP requirements, see the Council on Environmental Quality Regulations, 40 CFR Part 1500-1508, or the U.S. Department of Energy website at: https://energy.gov/sites/prod/files/NEPA-40CFR1500_1508.pdf.
5. Emergency Communications Systems and Capabilities

Emergency communications are accomplished through many technologies, each with varying capabilities, standards, and features. As the public safety community adopts new technologies, LMR will remain an important tool for mission critical voice communications for emergency responders in the field for many years to come. Successful future planning requires a multi-path approach in maintaining LMR systems’ operability and interoperability while planning and deploying new emergency communications technologies. As such, grant recipients should invest in sustaining LMR capabilities while also planning for new technologies.

As LMR and IP-based technologies continue to become integrated with one another, interoperability and cybersecurity become increasingly important. When procuring equipment or software for emergency communications systems, grant recipients are strongly encouraged to purchase standards-based technologies to facilitate interoperability and security among jurisdictions and disciplines at all levels of government. Table 2 provides best practices for promoting interoperability and security in several types of emergency communications capabilities. For detailed standards and resources for each system type, refer to Appendix B.

Table 2. Best Practices when Purchasing Emergency Communications Capabilities

<table>
<thead>
<tr>
<th>Systems</th>
<th>Best Practices</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Land Mobile Radio</strong></td>
<td>• Review the P25 technical standards for LMR</td>
</tr>
<tr>
<td></td>
<td>• Specify applicable P25 standards and specifications in the P25 Steering Committee list of approved standards. For the list of current P25 standards, see: <a href="http://www.project25.org">http://www.project25.org</a></td>
</tr>
<tr>
<td></td>
<td>• Select P25 Compliance Assessment Program (P25 CAP) approved equipment</td>
</tr>
<tr>
<td></td>
<td>• Obtain documented evidence of P25 CAP compliance; in the absence of testing information on the P25 Compliance Assessment Bulletins, entities should request results of applicable test procedures identified in the P25 standards list</td>
</tr>
<tr>
<td></td>
<td>• Ensure additional features purchased are P25 compliant (e.g., AES 256 encryption)</td>
</tr>
<tr>
<td></td>
<td>• Avoid non-standard features, but if necessary, ensure features are identified and understand impact on interoperability</td>
</tr>
<tr>
<td></td>
<td>• Provide written justification for non-compliant P25 purchases</td>
</tr>
<tr>
<td><strong>Public Safety Broadband</strong></td>
<td>• Seek guidance from the FirstNet Authority on how to best incorporate broadband communications into a public safety entity’s communications ecosystem</td>

Proper management of grants enables recipients to effectively implement projects and access grant funds. It also can establish the entity as a trusted and capable steward of federal funding that is able to manage additional funds in the future. This section provides guidance and best practices for recipients to use throughout the grant life cycle. Table 3 provides best practices during the four major phases of the grant:

- Planning grant applications (Pre-Award)
- Reviewing award agreements and funding (Award)
- Implementing grant-funded projects (Post Award)
- Completing federal grant projects (Closeout)

Table 3. Suggested Actions and Best Practices to Use during Grant Cycle Phases

<table>
<thead>
<tr>
<th>Phases</th>
<th>Suggested Actions / Best Practices</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pre-Award</td>
<td>• Review and understand the NECP, SCIP, and other applicable plans</td>
</tr>
<tr>
<td></td>
<td>• Coordinate with the SWIC and other key governance bodies and leadership to document needs, align projects to plans, and identify funding options60</td>
</tr>
<tr>
<td></td>
<td>• Work with SAA to include projects in state preparedness plans and to secure funding</td>
</tr>
<tr>
<td></td>
<td>• Review program requirements included in grant guidance</td>
</tr>
<tr>
<td></td>
<td>• Consult the federal granting agency, spectrum authority (i.e., FCC or FirstNet), and SAFECOM Guidance when developing projects</td>
</tr>
<tr>
<td></td>
<td>• Align projects to federal and state-level plans and initiatives</td>
</tr>
<tr>
<td></td>
<td>• Include coordination efforts with the whole community in applications</td>
</tr>
<tr>
<td></td>
<td>• Identify staff to manage financial reporting and programmatic compliance requirements</td>
</tr>
<tr>
<td></td>
<td>• Develop project and budget milestones to ensure timely completion</td>
</tr>
<tr>
<td></td>
<td>• Identify performance measures and metrics that will help demonstrate impact</td>
</tr>
<tr>
<td></td>
<td>• Consider potential impacts of EHP requirements on implementation timelines</td>
</tr>
<tr>
<td></td>
<td>• Ensure proper mechanisms are in place to avoid commingling and supplanting of funds</td>
</tr>
<tr>
<td></td>
<td>• Evaluate the ability of sub-recipients to manage federal funding</td>
</tr>
<tr>
<td></td>
<td>• Consider how the project will be sustained after grant funding has ended</td>
</tr>
<tr>
<td>Award</td>
<td>• Review award agreement to identify special conditions, budget modifications, restrictions on funding, pass-through and reporting requirements, and reimbursement instructions</td>
</tr>
<tr>
<td></td>
<td>• Update the proposed budget to reflect changes made during review and award</td>
</tr>
<tr>
<td></td>
<td>• Inform sub-recipients of the award and fulfill any pass-through requirements</td>
</tr>
<tr>
<td>Post Award</td>
<td>• Establish repository for grant file and related data to be collected and retained from award through closeout, including correspondences, financial and performance reports, project metrics, documentation of compliance with EHP requirements and technology standards</td>
</tr>
<tr>
<td></td>
<td>• Ensure fair and competitive procurement process for all grant-funded purchases</td>
</tr>
<tr>
<td></td>
<td>• Understand the process for obtaining approval for changes in scope and budget</td>
</tr>
<tr>
<td></td>
<td>• Adhere to proposed timeline for project and budget milestones; document and justify any delays impacting progress or spending</td>
</tr>
<tr>
<td></td>
<td>• Leverage federal resources, best practices, and technical assistance</td>
</tr>
<tr>
<td></td>
<td>• Complete financial and performance reports on time</td>
</tr>
<tr>
<td></td>
<td>• Draw down federal funds as planned in budget milestones or in regular intervals</td>
</tr>
<tr>
<td></td>
<td>• Complete projects within grant period of performance</td>
</tr>
<tr>
<td>Closeout</td>
<td>• Ensure all projects are complete</td>
</tr>
<tr>
<td></td>
<td>• Maintain and retain data as required by the award terms and conditions</td>
</tr>
<tr>
<td></td>
<td>• File closeout reports; report on final performance</td>
</tr>
</tbody>
</table>

60 Stakeholders can also contact their respective Regional Coordinator for guidance.
7. Funding Sources

Applicants should consider all available funding sources, including traditional grants to help fund initial capital investments or improvements to communications systems, as well as other sources of funding that may partially fund emergency communications projects.

**Traditional Grant Funding**

CISA is charged with coordinating federal grants funding emergency communications. Through its work with the ECPC Grants Focus Group, CISA identified more than 20 federal grants and loans that fund emergency communications in FY 2018. When applying for these funds, grant applicants are encouraged to:

- Identify current grant funding available and alternative sources of funding
- Review eligibility requirements, program goals, and allowable costs
- Understand what past grants have funded in your jurisdiction
- Partner with entities eligible to receive other funding sources

**Other Sources of Federal Funding**

While SAFECOM Guidance traditionally covered federal financial assistance programs, there are other grant and loan programs that can provide extensive funding for state, local, tribal, and territorial public safety communications needs. For example, the U.S. Department of Agriculture (USDA) Rural Utility Service integrated interoperable emergency communications and 911 upgrade authority in its Telecommunications Loan Program, and loans and grants from USDA Rural Development’s Community Facilities Program provided critical funding for emergency communications projects. While loans offer an alternative to traditional grants, applicants should work with financial experts to understand loan terms and ensure their proposals meet all requirements under each program.

Also, there are several federal programs that are not solely focused on public safety communications (e.g., Rural Telecommunications and Rural Electrification Programs). These programs can improve access to 911 services; provide all hazards warnings; improve integration and interoperability of emergency communications; provide critical infrastructure protection and outage prevention; and increase the reliability of standby power to emergency responders. Applicants are encouraged to identify additional funding sources, such as rural grants and loans, and work with eligible entities for those programs to improve communications infrastructure.

---

61 For an updated list of federal grants and loans that fund emergency communications, see: https://www.dhs.gov/safecom/funding. Applicants can find and search grants and loans at: https://www.grants.gov.
CISA, SAFECOM, and NCSWIC publish numerous resources for state, local, tribal, and territorial governments and their public safety agencies to identify funding mechanisms for emergency communications projects. The following list includes educational documents and tools designed for stakeholders, available on the SAFECOM Funding website.

- **Funding Mechanisms for Public Safety Communications Systems**, provides an overview of various methods of funding emergency communications systems (e.g., bonds, special tax, surcharges), and specific examples of where these methods have been used to fund state and local systems.
  - **Funding and Sustainment Methods for Public Safety Communications Systems (2016 and 2015)**, present funding and sustainment methods used by state and local agencies to fund emergency communications systems.

- Various educational documents, brochures, and action memorandum to assist stakeholders identify funding and procure radio communications systems.
  - **LMR 101, Part I: Educating Decision Makers on LMR Technologies**, includes basic information for use in educating decision-makers about the importance of LMR technologies. The paper includes simple diagrams, terminology, history, and current usage of LMR technologies by public safety agencies.
  - **LMR for Decision Makers, Part II: Educating Decision Makers on LMR Technology Issues**, provides information about emerging technologies, and the impact such technologies will have on LMR systems as they evolve. Information includes discussion of the LMR-to-LTE transition, and the need to sustain mission critical voice through such transition.
  - **LMR for Project Managers, Part III: A P25 Primer for Project Managers and Acquisition Managers**, delivers an introduction about standards-based purchasing, and an overview of the P25 standard explaining its importance to public safety interoperability.
  - **LMR Brochure**, provides stakeholders with a hand-out to give to state and local decision-makers and elected officials to explain why it is important to fund and sustain LMR.
  - **LMR Action Memorandum**, provides stakeholders with basic information they can give to state and local decision-makers and elected officials on why it is important to fund and sustain public safety radio systems.

- **2018 Emergency Communications System Lifecycle Planning Guide**, provides assistance to stakeholders in their efforts to fund, plan, procure, implement, support, and maintain public safety communications systems, and eventually to replace and dispose of system components.
  - **Life Cycle Planning Tool**, provides additional information on funding considerations during each phase of the life cycle.
  - **2011 Emergency Communications System Life Cycle Planning Guide**, assists efforts to design, implement, support, and maintain a public safety communications system.

- **Interoperability Business Case: An Introduction to Ongoing Local Funding**, advises the community on the elements needed to build a strong business case for funding interoperable communications.

Appendix B – Technology and Equipment Standards and Resources

This appendix provides grant recipients with operational best practices, technical standards, and resources to reference when developing communications systems. Above all, grant recipients should purchase standards-based technologies and equipment that promote interoperability with partners.

How to Use this Appendix

When procuring communications infrastructure, there are overarching considerations and guidelines, as well as specific standards to follow. No single document could include everything public safety communications system planners need to know. However, this appendix lists technical standards applicable to public safety communications systems and resources for additional information. The following topics are included in this appendix:

- System Lifecycle Planning
- Cybersecurity
- Land Mobile Radio
- Public Safety Broadband
- Alerts, Warnings, and Notifications
- 911 Systems
- Data Exchange and Information Sharing Environment
- Continuity and Resilience

System Lifecycle Planning

Grant recipients should employ best practices and recommendations from the 2018 Emergency Communications System Lifecycle Planning Guide

The Department of Homeland Security (DHS) Cybersecurity and Infrastructure Security Agency (CISA), in collaboration with SAFECOM and the National Council of Statewide Interoperability Coordinators (NCSWIC), developed the 2018 Emergency Communications System Lifecycle Planning Guide, which provides recommended actions through easy-to-use checklists for each phase of the system lifecycle planning model. It is intended for stakeholders to use in their efforts to fund, plan, procure, implement, support, and maintain public safety communications systems, and eventually replace and dispose of system components.

Each phase of the system lifecycle planning model—Pre-Planning; Project Planning; Request for Proposals and Acquisition; Implementation; Support, Maintenance, and Sustainment; End-of-Lifecycle Assessment and Replacement; and Disposition—includes best practices, considerations, and recommended checklists to assist public safety agencies embarking on system lifecycle planning. Specifically, the checklists are designed to be torn-out, referenced, and used by project management teams throughout the system lifecycle. Table B-1 summarizes the system lifecycle planning model phases and high-level recommendations contained in the 2018 Emergency Communications System Lifecycle Planning Guide. Reference the guide for additional information on recommendations.
<table>
<thead>
<tr>
<th>Planning Model</th>
<th>Recommendations</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Phase 1: Pre-Planning</strong>&lt;br&gt;<strong>Timing:</strong> 6–12 months&lt;br&gt;<strong>Goals:</strong> Inform and secure the decision to replace, upgrade, maintain, dispose of, and/or acquire a new system</td>
<td>• Establish the core planning team&lt;br&gt;• Research and develop system and funding options&lt;br&gt;• Decide on the optimal and alternative solutions with funding options&lt;br&gt;• Plan for frequency needs and channel programming&lt;br&gt;• Develop a business case, presentation materials, and strategic plan&lt;br&gt;• Identify a legislative- or executive-level project champion&lt;br&gt;• Present to decision-makers and secure funding to support the initial build-out and sustain the system throughout the entire lifecycle</td>
</tr>
<tr>
<td><strong>Phase 2: Project Planning</strong>&lt;br&gt;<strong>Timing:</strong> 6–18 months&lt;br&gt;<strong>Goals:</strong> Formalize the project team; identify operational and technical requirements for system replacement and upgrade; and develop the project plan</td>
<td>• Consider how long the planning process can take and communicate expected timeframes to elected officials&lt;br&gt;• Collect user needs and requirements and incorporate into project plans&lt;br&gt;• Engage with communications leaders early for guidance and support (e.g., Statewide Interoperability Coordinators [SWIC], Statewide Interoperability Governing Bodies [SIGB])&lt;br&gt;• Identify strong Project Sponsors (e.g., state or local elected officials)&lt;br&gt;• Begin planning the Request for Proposals (RFP)</td>
</tr>
<tr>
<td><strong>Phase 3: RFP and Acquisition</strong>&lt;br&gt;<strong>Timing:</strong> 6–12 months&lt;br&gt;<strong>Goals:</strong> Select the appropriate procurement vehicle and procure systems and components</td>
<td>• Develop a written action plan&lt;br&gt;• Form the RFP team&lt;br&gt;• Develop the Statement of Work (SOW)&lt;br&gt;• Include specifications or requirements in the RFP&lt;br&gt;• Establish written evaluation criteria, well before the award&lt;br&gt;• Conduct a formal objective review process and document results</td>
</tr>
<tr>
<td><strong>Phase 4: Implementation</strong>&lt;br&gt;<strong>Timing:</strong> 12–18 months&lt;br&gt;<strong>Goals:</strong> Develop an implementation plan; install new systems; test; train users; and transition from legacy to new</td>
<td>• Develop the implementation plan&lt;br&gt;• Understand and document testing procedures (e.g., factory testing, staging, site installation and testing, coverage verification, testing and acceptance, cut-over, final acceptance)&lt;br&gt;• Update operational procedures and train users&lt;br&gt;• Promote new communications capabilities and benefits to the community</td>
</tr>
<tr>
<td><strong>Phase 5: Support, Maintenance and Sustainment</strong>&lt;br&gt;<strong>Timing:</strong> Year(s) 1–25&lt;br&gt;<strong>Goals:</strong> Inventory and maintain equipment; manage budget; assess and communicate needs</td>
<td>• Maintain an accurate inventory of equipment (e.g., scope, database tool, inventory team, processes to compile and secure data)&lt;br&gt;• Determine and execute an ongoing maintenance and operations model&lt;br&gt;• Manage the budget when the project is conceived, directly before it is funded and after delivery&lt;br&gt;• Share communications needs with decision-makers early and continually</td>
</tr>
<tr>
<td><strong>Phase 6: End-of-Lifecycle Assessment and Replacement</strong>&lt;br&gt;<strong>Timing:</strong> Years 7–25&lt;br&gt;<strong>Goals:</strong> Determine when to replace systems or components with solutions to best fit operational and technical needs</td>
<td>• Conduct ongoing assessments of current system (e.g., implement a balanced scorecard) to plan for technology maturity&lt;br&gt;• Refresh or upgrade systems, as needed, to extend the life&lt;br&gt;• Determine potential replacement solutions, with consideration to support national, state, and regional interoperability initiatives; consider early adoption of new technologies; and, adhere to widely-used technical standards</td>
</tr>
<tr>
<td><strong>Phase 7: Disposition</strong>&lt;br&gt;<strong>Timing:</strong> 90 days after cut-over or transition&lt;br&gt;<strong>Goals:</strong> Determine options and dispose of legacy systems or components</td>
<td>• Develop the disposition plan&lt;br&gt;• Determine options (e.g., reuse or repurpose old components, consider space availability, convey surplus equipment to partner agencies) in consideration of legal or policy limitations, and business requirements&lt;br&gt;• Brief leaders on disposition plans&lt;br&gt;• Identify lessons learned following disposition</td>
</tr>
</tbody>
</table>

**Table B-1. System Lifecycle Planning Model and Recommendations Summary**

FY 2019 SAFECOM Guidance on Emergency Communications Grants
Land mobile radio (LMR) has long been used by emergency first responders for mission critical communications. As technologies evolve, LMR systems are exposed to greater security risks such as jamming, eavesdropping, and denial of service. In addition, the emergency response community is deploying advanced voice, video, and data services over Internet Protocol (IP)-based networks to enhance response operations. Although these services enhance capabilities, they also introduce new and significant cyber risks that the emergency response community must plan and address. Traditional emergency communications systems have limited means of cyber entry, but IP-based platforms enable interconnection with a wide range of public and private networks, such as wireless networks and the Internet.

The public safety community must continually identify risks and address evolving security requirements. Emergency communications cybersecurity is a shared mission across all levels of government, the private sector, nongovernmental organizations, and even the public. To protect emergency communications from cyber threats and attacks, recipients will need to invest in solutions that enhance cybersecurity posture. Cybersecurity must be addressed through planning, governance, and technology solutions that secure networks. Recipients should ensure cybersecurity planning is comprehensive and addresses all network component lifecycles, and updates to non-technology support activities, such as mutual aid agreements, standard operating procedures, and policy development. Personnel should be trained on the latest security, resiliency, continuity and operational practices and maintain in-service training as new technology and methods are made available.

Despite every effort, cyber threat events will occur. Being prepared to execute response processes and procedures, prevent expansion of the event, mitigate its effects, and eradicate the incident is necessary. Incident response plans, recovery or resiliency plans, and continuity of operations plans are useful in cybersecurity incident response. Recovery planning processes and strategies are improved by incorporating lessons learned into future activities.

**Cybersecurity Framework**

The National Institute of Standards and Technology (NIST) developed the *Framework for Improving Critical Infrastructure Cybersecurity* (Cybersecurity Framework) as a flexible and voluntary risk-based approach that outlines techniques to secure critical infrastructure. Recipients are strongly encouraged to implement NIST’s framework to complement an existing risk management process or to develop a credible program if one does not exist. In addition to NIST materials, sector-specific Cybersecurity Framework guidance is available from CISA.

The NIST Cybersecurity Framework establishes five functions to integrate cybersecurity into mission functions and operations, including: 1) *identify*, evaluate, and prioritize risks for their entity; 2) *protect* against identified risks; 3) *detect* risks to the network as they arise; 4) deploy *response* capabilities to mitigate risks; and 5) establish *recovery* protocols to ensure the resiliency and continuity of communications. DHS’s Emergency Services Sector has developed tailored guidance specific to emergency service disciplines, including a NIST Framework implementation guide with a repeatable process to identify and prioritize cybersecurity improvements.62

---

62 Suggested resources include the 2015 ESS Cybersecurity Framework Implementation Guidance and 2014 ESS Roadmap to Secure Voice and Data Systems.
There is considerable cybersecurity guidance available from government, industry, and academic organizations and a multitude of standards development organizations (SDOs) that contribute to technical standards and best practices. Organizations managing critical infrastructure will continue to have unique risks—different threats, different vulnerabilities, and different risk tolerances—and how they implement the standards and guidance available will vary. There is currently no one-size-fits-all network cybersecurity solution. Table B-2 lists the applicable standards for cybersecurity that recipients should leverage as they identify and select the standards that fit their system and mission needs. Table B-3 lists cybersecurity resources for additional information. While these lists are not exhaustive, they include some of the more comprehensive guidance for the public safety community.

Table B-2. Cybersecurity Standards

<table>
<thead>
<tr>
<th>Organizations</th>
<th>Standards</th>
</tr>
</thead>
<tbody>
<tr>
<td>Third Generation Partnership Project (3GPP) Security Standards</td>
<td>3GPP’s security working group, SA3, is continuously updating security standards associated with prevalent technologies, most notably IP Multimedia Subsystem. Specifically, the group is addressing 3GPP standards for network access security, network domain security, user domain security, application domain security, and user configuration and visibility of security is important for critical infrastructure implementations. <a href="http://www.3gpp.org">www.3gpp.org</a>.</td>
</tr>
<tr>
<td>European Telecommunications Standards Institute (ETSI)</td>
<td>ETSI Telecommunications &amp; Internet converged Services &amp; Protocols for Advanced Networks (TISPAN) has been a key standardization body in creating Next Generation Network (NGN) specifications, and their Cyber Security committee focuses entirely on privacy and security activities. Of note for emergency communications are the ETSI TS 102, 123, 182, and 282 series. <a href="http://www.etsi.org/">http://www.etsi.org/</a>.</td>
</tr>
<tr>

</table>
Grant recipients should purchase digital LMR systems and equipment compliant with the P25 suite of standards, and include all applicable P25 standards and expectations for interoperability in any SOW or acquisition documents.

Recipients should purchase P25 compliant systems and equipment that has been assessed as compliant in accordance with the P25 Compliance Assessment Program.

If encryption is required, agencies shall ensure compliance with the P25 Block Encryption Protocol standard and implement Advanced Encryption Standard 256 bit encryption.

Recipients should ensure all P25 eligible equipment, features, and capabilities selected are P25 compliant, to include new equipment and upgrades.

When purchasing bridging or gateway devices that have a VoIP capability to provide connectivity between LMR systems, those devices should, at a minimum, implement either the BSI specification or the ISSI.

LMR systems are terrestrially-based, wireless, narrowband communications systems commonly used by federal, state, local, tribal, and territorial emergency responders, public works companies, and the military in non-tactical environments, to support voice and low-speed data communications. These systems are designed to meet public safety’s unique mission and critical voice requirements and support time-sensitive, lifesaving tasks, including sub-second voice call-setup, group calling capabilities, high-quality audio, and priority access to the end-user. Because LMR systems implemented by the public safety community support lifesaving operations, they are designed to achieve high levels of reliability, redundancy, coverage, and capacity, and can operate in harsh natural and man-made environments. LMR technology has progressed over time from conventional, analog voice service to complex systems incorporating digital and trunking features. These enhancements have improved the interoperability, spectral efficiency, security, reliability, and functionality of voice and low speed data communications.

For the foreseeable future, the public safety community is expected to follow a multi-path approach to develop, establish, and maintain critical communications capabilities. To improve interoperability across investments, grant recipients are strongly encouraged to ensure digital voice systems and equipment purchased with federal grant funds are compliant with the Project 25 (P25) suite of standards, unless otherwise noted in a program’s grant guidance. Recipients should ensure all P25 eligible equipment, features, and capabilities selected are P25 compliant, to include new equipment and upgrades. When federal grant funds are used to purchase P25 LMR equipment and systems that contain non-standard features or capabilities, while a comparable P25 feature or capability is available, recipients must ensure the standards-based feature or capability is included.

Grant recipients should purchase P25 compliant systems and equipment that has been assessed in accordance with the P25 Compliance Assessment Program (P25 CAP). P25 standards provide many

---

63 Applicants should read grant guidance carefully to ensure compliance with standards, allowable cost, documentation, reporting, and audit requirements. If interested in using federal funds to purchase equipment that does not align with P25 standards or does not appear on the approved equipment list, the applicant should consult with the federal grant-making agency to determine if non-P25 compliant equipment is allowable. In some cases, written justification must be provided to the grantor. Many agencies will not approve non-standards-based equipment unless there are compelling reasons for using other solutions. Authorizing language for most emergency communications grants strongly encourages investment in standards-based equipment. Funding requests by agencies to replace or add radio equipment to an existing non-P25 system (e.g., procuring new portable radios for an existing analog system) will be considered if there is a clear rationale why such equipment should be purchased and written justification of how the equipment will advance interoperability and support eventual migration to interoperable systems. Written justification should also explain how that purchase will serve the needs of the applicant better than equipment or systems that meet or exceed such standards. Absent compelling reasons for using other solutions, agencies should invest in standards-based equipment.
technical specifications for that are designed to ensure equipment is interoperable regardless of manufacturer. Recipients should obtain documented evidence of P25 compliance from the manufacturer that the equipment has been tested and passed all the applicable, published, normative P25 compliance assessment test procedures for performance, conformance, and interoperability as defined in the latest P25 Compliance Assessment Bulletins for testing requirements. If documentation for applicable equipment is not available through the P25 CAP or there is an absence of applicable testing in the P25 CAP, recipients should obtain documented evidence from the manufacturer stating that the applicable tests were conducted in accordance with the published test procedures in the P25 suite of standards.

Recipients using federal funds to purchase encryption options for new or existing communications equipment shall ensure encrypted capabilities are compliant with the published P25 Block Encryption Protocol Standard. Recipients investing in encryption must implement the Advanced Encryption Standard (AES) 256-bit Encryption Algorithm as specified in the P25 Block Encryption Protocol. The P25 suite of standards references the use of AES as the primary encryption algorithm but continues to allow Data Encryption Standard-Output Feedback (DES-OFB) for backwards compatibility and interoperability with existing systems. The current version of the P25 Block Encryption Protocol, ANSI/TIA-102.AAAD should be identified in all procurement actions when encryption is required.

Recipients seeking to use federal grant funds to purchase non-standard encryption features (e.g., 40-bit encryption, DES-OFB) or capabilities for new or existing equipment must ensure AES 256-bit is also included to ensure their devices have the capability to interoperate in an encrypted mode. Agencies currently using DES-OFB may continue to invest in this encryption method but should plan to migrate to AES as soon as possible. The continued use of DES-OFB or other non-standard encryption algorithms is strongly discouraged. The Federal Government recognizes AES as a more robust encryption algorithm and strongly recommends entities migrate to AES as it will enhance interoperability with federal entities, as well as state and local agencies implementing encryption in the future.

When purchasing bridging or gateway devices that have a VoIP capability to provide connectivity between LMR systems, those devices should, at a minimum, implement either the Bridging System Interface (BSI) specification or the P25 Inter Radio Frequency Sub-System Interface (ISSI)/Console Sub-System Interface (CSSI) as a part of their VoIP capability. Note, there are potential interoperability issues when implementing ISSI/CSSI, as testing parameters are still under development and vendors may interpret accredited technical standards differently or may test interfaces inconsistently.

The P25 Steering Committee published a list of Approved Project 25 Suite of Standards that includes the most recent documents and revisions. Also, the P25 Technology Interest Group’s Capabilities Guide can help determine which standards are applicable to proposed purchases and projects.

</tbody>
</table>
Applicants investing in broadband technologies should be aware that the Federal Government is developing a Nationwide Public Safety Broadband Network (NPSBN). The First Responder Network Authority’s (FirstNet Authority) mission is to deploy the NPSBN to provide long-term evolution (LTE)-based broadband services and applications to public safety entities. The network is a single, nationwide network architecture consisting of an independently evolved packet core network (EPC), transport backhaul, and radio access network (RAN).

Applicants are encouraged to engage in advancement of the NPSBN at state and regional levels. Applicants must engage the FirstNet Authority in advance of proposing the acquisition of broadband projects that will operate in the 700 megahertz (MHz) public safety broadband spectrum (758–769 MHz and 788–799 MHz) that has been licensed to the FirstNet Authority through the Federal Communications Commission. Applicants should demonstrate in applications that the project:

- State and have documentation that the FirstNet Authority has granted permission to operate in the public safety broadband spectrum;
- Comply with the FirstNet Authority technical requirements;
- Demonstrate coordination with statewide broadband planners;
- Demonstrate the ability to maintain technical compliance and advancement with the FirstNet network throughout the system’s lifecycle;
- Accelerate statewide broadband deployment; and
- Integrate into the NPSBN.

Applicants should coordinate with the FirstNet Authority in advance of any strategic acquisition of LTE equipment to ensure understanding of all requirements and restrictions impacting broadband investments and that purchases support future service choices. Applicants should also monitor federal actions affecting broadband investments and continue planning and outreach activities (e.g., community education, documenting user needs), as well as work with applicable governing bodies in planning for the arrival of broadband and other advanced technologies, including:

- Planning for integration of information technology infrastructure, software, and site upgrades necessary to connect to the FirstNet network;
- Leveraging broadband devices including smartphones, feature phones, tablets, wearables, laptops, ruggedized smartphones, ruggedized tablets, USB modems/dongles, in-vehicle routers, and Internet of Things devices;
- Employing customer-owned and managed broadband deployable equipment, enabling public safety to own and dispatch coverage expansion or capacity enhancement equipment within their jurisdiction;
- Using broadband device accessories that enable efficient and safe public safety operations such as headsets, belt clips, ear pieces, remote Bluetooth sensors, and ruggedized cases;
- Installing FirstNet SIM/UICC card to allow public safety users to update existing devices, “Bring Your Own Device,” and new devices to operate on public safety prioritized services; and
• Securing one-time purchase and subscription-based applications for public safety use, which could include, among several other options, enterprise mobility management, mobile Virtual Private Network, identity services, or cloud service tools.

Non-LTE wireless broadband technologies, such as Wi-Fi, WiMAX, and mesh networks, are sometimes used to supplement public safety communications. These solutions, which are either agency-owned or provided by a commercial provider, allow agencies to access voice, data, and video applications. Grant recipients should consider the overall impact of using other wireless broadband technologies given ongoing advancements in FirstNet’s deployment and unique interoperability challenges introduced by each of the various technologies.

Upon taking into account these cautions, applicants may be able to use federal grant funds for costs related to the implementation of alternative broadband technologies and the deployment of fiber optic backhaul networks in rural and unserved areas. Applicants should work closely with federal granting agency and commercial suppliers and providers to ensure that grant-funded systems and equipment will be compatible and interoperable with current and future solutions. Applicants are encouraged to implement innovative solutions that improve communications capabilities and help with planning and preparation for the deployment of the NPSBN.

IEEE also maintains the WMAX family of 802.16 standards.</td>
</tr>
<tr>
<td><strong>Open Geospatial Consortium (OGC)</strong></td>
<td>OGC is an international non-profit organization committed to making quality open standards for the global geospatial community. These standards are made through a consensus process and are freely available for anyone to use to improve sharing of the world's geospatial data.</td>
</tr>
</tbody>
</table>
During an emergency, alerts, warnings, and notifications (AWNs) enable public safety officials to provide the public with information quickly. The Federal Emergency Management Agency (FEMA) Integrated Public Alert and Warning System (IPAWS) is an Internet-based capability that federal, state, local, tribal, and territorial authorities can use to issue critical public alerts and warnings. IPAWS is accessed through software that meets IPAWS system requirements. There is no cost to send messages through IPAWS, although there may be costs associated with acquiring compatible alert origination software. IPAWS is not mandatory and does not replace existing methods of alerting, but instead complements existing systems and offers new capabilities.

FEMA built IPAWS to ensure that under all conditions the President of the United States can alert and warn the American people. Federal, state, local, tribal, and territorial authorities also have the opportunity to use IPAWS to send alerts and warnings within their jurisdictions. IPAWS improves alert and warning capabilities by allowing authorities to deliver alerts simultaneously through multiple communications pathways as many people as possible to save lives and protect property. These communication pathways include:

- Emergency Alert System (EAS) used by authorities to send detailed warnings via broadcast, cable, satellite, and wireline radio and television channels;
- Wireless Emergency Alerts (WEA) sent to mobile devices like a text message, even when cellular networks are overloaded and can no longer support person-to-person calls, texts, or emails;
- National Weather Service Dissemination Systems, including the National Oceanic and Atmospheric Administration (NOAA) Weather Radio;
- Unique Alert Systems that have permission to retrieve alerts directly from IPAWS and deliver the alerts to their customer base; and
- Future Systems, including computer gaming systems, digital signs, siren systems, Internet search engines, social sharing websites, instant messaging, and others that are or could use IPAWS.

In order to access IPAWS, grant recipients should select equipment and applications that adhere to both the Common Alerting Protocol (CAP) and IPAWS Profile standards. Alert and warning software and equipment is developed, produced, and distributed by various vendors. While the Federal Government does not endorse any specific vendor, piece of software, or equipment, grant recipients should confirm vendors meet CAP and IPAWS Profile standards, provide support services, and include basic security measures (e.g., firewalls, anti-virus tools, anti-spyware tools) and strong access controls requiring authentication of users. A key consideration is access to the service through jammed or damaged communications channels during a real emergency. Recipients should also consider factors affecting continuity of operations, such as support of remote employees, mobile alerting capabilities, and contingent operations in disruptive circumstances.
To maintain AWN issuance proficiencies, agencies sending alerts should conduct trainings, exercises, and tests of systems on a regular basis. Lessons observed from these activities and incidents should be evaluated, documented, and incorporated into future operations. Alert originators should also work to minimize issuance delays, from the point of a hazard’s detection to dissemination, by creating message templates, expediting information sharing, identifying and establishing triggers, and avoiding ad-hoc decision making.

Agencies are encouraged to coordinate with regional partners and submit applications that promote regional (e.g., multi-jurisdictional, cross-state, cross-border) collaboration and cost-effective measures. AWN grant funds should focus on eligible public alert and warning activities to include, but not limited to the purchase, training, exercising, replacement, and maintenance (e.g., annual license, subscription fees, upgrades) of alert and warning systems, software, and equipment.

### Table B-6. AWN Standards and Resources

<table>
<thead>
<tr>

</tbody>
</table>
The National 911 Program, administrated by the Department of Transportation National Highway Traffic Safety Administration (NHTSA), provides federal leadership and coordination in supporting and promoting optimal 911 services. This federal home for 911 plays a critical role by coordinating federal efforts that support 911 services across the Nation. The Implementation Coordination Office, jointly operated by the NHTSA and NTIA, administers a grant program, specifically for the benefit of 911 public safety answering points (PSAPs).

NG911 will seamlessly connect PSAPs and allow for the transmission and reception of multimedia type data (e.g., text messages, pictures, and video). As NG911 standards continue to evolve, applicants should consult the NG911 Standards Identification and Review to ensure that solutions developed or procured meet industry guidelines and standards. Applicants should consider the following when planning and implementing NG911:

- Strive for IP-enabled NG911 open standards and understand future technology trends to encourage system interoperability and emergency data sharing
- Establish collaborative relationships and policy mechanisms that facilitate the ongoing coordination required to plan, deploy, operate, and maintain NG911 systems
- Determine the responsible entity(ies) and mechanisms for geospatial data acquisition, reconciliation, and synchronization that are required for NG911
- Establish system access, security controls, and comprehensive cybersecurity plans to protect and manage access to NG911
- Ensure formalized governance models are in place to aid in the transition from legacy 911 to NG911
- Develop and implement sustainable funding models that support the planning, design, deployment, and ongoing operation of NG911
- Develop contract language that ensures the accountability of contractors in building, testing, deploying, operating, and maintaining interoperable and secure NG911 systems

</tbody>
</table>
Data exchange and information sharing solutions are as fundamental as a digital data “snapshot” transferred over electronic media, or as tailored as custom-interface applications that allow proprietary applications to be linked. Challenges for effective information exchange include increasing types of data being exchanged, such as geographic information systems, evacuee or patient tracking, biometrics, accident and crash telematics, Computer-Aided Dispatch, Automatic Vehicle Location, and more. To communicate seamlessly with the increasingly interconnected systems of the broader community, agencies should consider standards-based information exchange models. A few of widely used exchange models are provided as part of this appendix; however, an evaluation of who the organization most often communicates with, and what types of information are commonly exchanged, is recommended in selecting an ideal data exchange and information sharing solution.

The National Information Exchange Model (NIEM) is a framework for exchanging information that provides common terminology for users and a repeatable, reusable process for developing information exchange requirements. NIEM was established by the Departments of Justice and Homeland Security in 2005 to unite stakeholders from federal, state, local, tribal, and territorial governments and the private sector, to develop and deploy a national model for information sharing and the organizational structure to govern it. Today, all 50 states and many federal agencies are using or considering NIEM, including adoption by the Departments of Agriculture, Defense, Health and Human Services, and Transportation. NIEM allows disparate systems to share, exchange, accept, and translate information in an efficient manner that all users can understand.

In addition to the NIEM framework, agencies should reference the Global Reference Architecture (GRA) and the OASIS Emergency Data eXchange Language (EDXL) suite of data messaging standards. Applicable standards include the CAP; distribution element; hospital availability exchange; resources messaging; reference information model; situation reporting; and tracking emergency patients.

- **Global Reference Architecture** provides guidance for agencies to develop and establish a service-oriented architecture for public safety information sharing. The GRA incorporates and reuses appropriate subsets of the NIEM, as well as other models such as the Global Federated Identity and Privilege Management (GFIPM) sponsored by the Departments of Justice and Homeland Security. The GRA provides practitioners with overarching guidance that demonstrates how federal initiatives, including NIEM and GFIPM, work together and how to accelerate the planning process. Agencies can use this GRA tool to develop a well-conceived, formal approach to designing information sharing solutions and systems. A key benefit of a reference architecture is it helps promote consistent thinking and approaches among the people who use it, even if they have not shared information with each other.

- **OASIS EDXL** suite of data messaging standards facilitates information sharing among public safety agencies. Grant-funded systems, developmental activities, or services related to emergency response information sharing should comply with the following OASIS and HL7 standards: “OASIS EDXL-TEP” and Bi-directional Transformation of OASIS EDXL-TEP (Tracking of
Emergency Patients) v1.1 and HL7 v2.7.1 Specification Version and OASIS EDXL suite of data messaging standards. Compliance should include the following OASIS EDXL standards:
  - Common Alerting Protocol, version 1.2 or latest version
  - Distribution Element (DE), version 1.0 or latest version
  - Hospital AVailability Exchange (HAVE), version 1.0 or latest version
  - Resource Messaging (RM) standards, version 1.0 or latest version

<table>

<tr>
<td>NIEM</td>
<td>Applicants are encouraged to reference the <a href="https://www.niem.gov/">NIEM website</a> to develop a greater understanding of data exchange functions and processes.</td>
</tr>
<tr>
<td>GRA</td>
<td>Many Department of Justice grant solicitations require its grant recipients to comply with the GRA, specifically the Global Standards Package, which describes a full information sharing technology standards implementation suite that addresses data standardization, messaging architecture, security, and privacy requirements. For additional information, including technical assistance and training opportunities, visit the Office of Justice Programs website at: <a href="https://it.ojp.gov/initiatives/gra">https://it.ojp.gov/initiatives/gra</a>.</td>
</tr>
</tbody>
</table>

**Continuity and Resilience**

- Grant recipients should target funding toward activities that address communications continuity, survivability, and resiliency. Activities can include system assessments, analysis of threats and vulnerabilities, and strategic plan and procedural updates to mitigate identified risks.

Lessons learned from major disasters, unplanned events, and full-scale exercises have identified a need for greater coordination of emergency communications among senior elected officials, emergency management agencies, and first responders at all levels of government. Responders arriving on the scene of a domestic incident are not always able to communicate with other response agencies, particularly when the incident requires a multi-agency, regional response effort, or when primary communications capabilities fail. This lack of operability and interoperability between agencies is further complicated by problems with communications continuity, survivability, and resilience, which hinders the ability to share critical information, and can compromise the unity-of-effort required for an effective incident response.

Applicants investing in emergency communications are encouraged to work with Statewide Interoperability Coordinators, Statewide Interoperability Governance Bodies, and appropriate stakeholders across levels of government to:

- Establish robust, resilient, reliable, secure, and interoperable communication capabilities
- Plan for mission-related communications and connectivity among government leadership, internal elements, other supporting organizations, and the public under all conditions
- Trace all communications systems/networks from end-to-end to identify Single Points of Failure
- Recipients should also address the following issues:
o Integrate communications needs into continuity planning efforts and emergency operations plans by incorporating mitigation options to ensure uninterrupted communications support
o Maintain and protect communications capabilities against emerging threats, both man-made and natural, to ensure their readiness when needed
o Frequently train and exercise personnel required to operate communications capabilities
o Test and exercise communications capabilities
o Establish a cybersecurity plan that includes continuity of an “out of band” communications capability such as High Frequency (HF) Radio Frequency (RF), fiber-based communications pathways that do not rely on public infrastructure

• Ensure key communications systems resiliency through:
  o Availability of backup systems
  o Diversity of network element components and routing
  o Geographic separation of primary and alternate transmission media
  o Availability of backup power sources
  o Access to systems that are not dependent on commercial infrastructure
  o Maintained spare parts for designated critical communication systems
  o Agreements with commercial suppliers to remediate communications Single Point of Failures

Table B-9. Continuity and Resilience Resources

- Middle Class Tax Relief and Job Creation Act of 2012 states T-Band relocation must take place no later than two years after the auction is complete. The Act requires that the auction begin by 2021; however, the deadline for relocation depends on how long the auction takes. For more information, see: http://www.gpo.gov/fdsys/pkg/BILLS-112hr3630enr/pdf/BILLS-112hr3630enr.pdf

Appendix D – Compliance Requirements for DHS Grants

This appendix provides guidance for Department of Homeland Security (DHS) and Federal Emergency Management Agency (FEMA) preparedness grants. Recipients using DHS/FEMA funds for emergency communications activities must comply with the SAFECOM Guidance on Emergency Communications Grants (SAFECOM Guidance) in accordance with DHS Standard Terms and Conditions. Table D-1 provides a list of requirements for DHS/FEMA grants. For additional information, see relevant sections within the SAFECOM Guidance. DHS/FEMA recipients should also refer to the specific Notice of Funding Opportunity for all programmatic requirements that apply (https://www.fema.gov/grants).

Table D-1. SAFECOM Guidance Compliance Instructions for DHS Recipients

<table>
<thead>
<tr>
<th>Topics</th>
<th>Requirements</th>
</tr>
</thead>
</table>
| National and Statewide Plan Alignment Sections 2.2, 2.5, 3.1 | • Describe in applications how proposed projects will support national goals and objectives in the National Emergency Communications Plan (NECP).  
• Describe in applications how proposed projects will align with your state or territory’s Statewide Communication Interoperability Plan (SCIP) goals and objectives. To find your SCIP, contact your Statewide Interoperability Coordinator (SWIC) or SCIP Point of Contact. If you do not know your SWIC, email the Cybersecurity and Infrastructure Security Agency (CISA) via oec@hq.dhs.gov.  
• Confirm submission of the SCIP Annual Snapshot to CISA via SCIP@hq.dhs.gov with your state governance body and leadership.  
• Explain how proposed projects address or support communications resiliency. |
| Project Coordination Sections 2.1, 2.2, 2.4, 3.2, 3.3 | • List all participants involved in project planning to demonstrate engagement with the whole community in accordance with Presidential Policy Directive-8 and the NECP.  
• Develop regional, multi-jurisdictional, multi-disciplinary, and cross-border projects to promote greater interoperability across agencies, pool grant resources, facilitate asset-sharing, and eliminate duplicate purchases.  
• Designate a full-time SWIC who has the authority and resources to actively improve interoperability with emergency management and response agencies across all levels of government, to include establishing statewide plans, policies, and procedures, and coordinating decisions on communications investments funded through federal grants.  
• Coordinate proposals with statewide emergency communications governance bodies and leaders (e.g., State Interoperability Executive Committee, SWIC, 911 Administrator). |
| National Incident Management System (NIMS) Sections 3.4, 4.3, 4.4 | • NIMS Implementation Objectives clarify the specific NIMS implementation criteria to be eligible for FEMA preparedness grants (see: https://www.fema.gov/implementation-guidance-and-reporting). Some grants may have additional NIMS training or personnel credentialing criteria (see the applicable Notice of Funding Opportunity for details).  
• States, territories, and tribal grant recipients report NIMS implementation annually in the Stakeholder Preparedness Review. States/territories and tribal grant recipients must submit their annual Stakeholder Preparedness Report (SPR) through the Unified Reporting Tool (URT) and email a copy of the URT submission to their respective DHS/FEMA Regional Federal Preparedness Coordinator and copy fema-spr@fema.dhs.gov. SPR Submissions are due no later than December 31st each year. |

<tbody>
<tr>
<td>Spectrum Licensing</td>
<td>Section 3.3</td>
</tr>
<tr>
<td></td>
<td>• If project requires new spectrum license, consult the appropriate statewide coordinator (e.g., SWIC), the Federal Communications Commission, and/or the FirstNet Authority to ensure the recipient will have authority to operate in the desired spectrum. Spectrum consultation should begin prior to application submission or during early phases of an approved project. A spectrum license must be in place before associated equipment can be purchased.</td>
</tr>
<tr>
<td>Planning and Organization</td>
<td>Sections 2.2, 3.4, 4.2</td>
</tr>
<tr>
<td></td>
<td>• Update and submit the SPR and Threat and Hazard Identification and Risk Assessment (THIRA). The Comprehensive Preparedness Guide 201 provides a three-step process for conducting a THIRA/SPR. Follow THIRA/SPR submission instructions in program guidance.</td>
</tr>
<tr>
<td>Training</td>
<td>Sections 2.3, 4.3</td>
</tr>
<tr>
<td></td>
<td>• Describe in applications how training projects support the NIMS Training Program, are consistent with NECP priorities, and address gaps identified through your state or territory’s SCIP, After-Action Reports, and other assessments.</td>
</tr>
<tr>
<td>Exercises</td>
<td>Section 2.3, 4.4</td>
</tr>
<tr>
<td></td>
<td>• Include participants from multiple jurisdictions, disciplines, and levels of government and private sector entities, as appropriate. For additional FEMA exercise guidance, see <a href="https://www.fema.gov/exercise">https://www.fema.gov/exercise</a>.</td>
</tr>
<tr>
<td></td>
<td>• Manage and execute exercises in accordance with the Homeland Security Exercise and Evaluation Program.</td>
</tr>
<tr>
<td>Land Mobile Radio (LMR) Equipment</td>
<td>Sections 2.5, 4.5, 5, Appendix B</td>
</tr>
<tr>
<td></td>
<td>• LMR systems are designed to meet public safety’s unique mission critical requirements and support time-sensitive, lifesaving tasks, including rapid voice call-setup, group calling capabilities, high-quality audio, and guaranteed priority access to the end-user. For the foreseeable future, the public safety community is expected to follow a multi-path approach to network infrastructure use and development of advanced technologies. Recipients should sustain current LMR capabilities during deployment of advanced technologies in accordance with the NECP.</td>
</tr>
<tr>
<td></td>
<td>• Select Project 25 (P25) standards-based equipment for LMR mission critical voice communications. See the DHS Authorized Equipment List to determine allowable equipment types for DHS/FEMA programs, and the P25 Compliance Assessment Program Approved Equipment List. If proposal includes any non-P25 LMR equipment, recipients must apply for prior approval.</td>
</tr>
<tr>
<td>Next Generation 911 (NG911) Systems</td>
<td>Sections 2.5, 4.5, 5, Appendix B</td>
</tr>
<tr>
<td></td>
<td>• NG911 is an Internet Protocol (IP)-based system that allows digital information (e.g., voice, photos, videos, text messages) to flow seamlessly from the public through the 911 network and on to emergency responders. If proposal includes NG911 systems, review the NG911 Standards Identification and Review and select IP-enabled 911 open standards equipment and software. For additional information, consult the National 911 Program Office.</td>
</tr>
<tr>
<td>Public Safety Broadband</td>
<td>Sections 2.5, 4.5, 5, Appendix B</td>
</tr>
<tr>
<td></td>
<td>• Consult with applicable governing bodies and leaders for the latest guidance from the FirstNet Authority, planning for public safety broadband network activities, and identifying the authority to operate on public safety spectrum. For additional information, refer to <a href="https://www.firstnet.gov/">https://www.firstnet.gov/</a>.</td>
</tr>
<tr>
<td>Alerts, Warnings, and Notifications</td>
<td>Sections 2.5, 4.5, 5, Appendix B</td>
</tr>
<tr>
<td></td>
<td>• The Integrated Public Alert and Warning System (IPAWS) is a modernization and integration of the Nation’s alert and warning infrastructure. Federal, state, local, tribal, and territorial alerting authorities can use IPAWS and integrate local systems that use Common Alerting Protocol standards with the IPAWS infrastructure. IPAWS provides public safety officials with an effective way to alert and warn the public about serious emergencies using the Emergency Alert System, Wireless Emergency Alerts, the National Oceanic and Atmospheric Administration Weather Radio, and other public alerting systems from a single interface. If proposal includes alerts and warnings, review IPAWS informational materials and Common Alerting Protocol standard at <a href="https://www.fema.gov/informational-materials">https://www.fema.gov/informational-materials</a>.</td>
