Welcome and Opening

Ralph Haller, Chair
John Lenihan, Chair, Interoperability Committee
Tom Sorley, Chair, Technology and Broadband Committee
Stu Overby, Spectrum Management Committee
Barry Luke, NPSTC Deputy Executive Director

The member organizations of the National Public Safety Telecommunications Council are grateful to the Department of Homeland Security’s Science and Technology Directorate, Office for Interoperability and Compatibility (OIC) and the National Protection and Programs Directorate, Office of Emergency Communications (OEC) Points of view or opinions expressed are those of the originators and do not necessarily represent the official position or policies of the U.S. Department of Homeland Security.
NPSTC Mission Statement

NPSTC is a federation of organizations whose mission is to improve public safety communications and interoperability through collaborative leadership.
NPSTC is a federation of organizations whose mission is to improve public safety communications and interoperability through collaborative leadership.
NPSTC is a federation of organizations whose mission is to improve public safety communications and interoperability through collaborative leadership.
NPSTC is a federation of organizations whose mission is to improve public safety communications and interoperability through collaborative leadership.

Session Overview

- Interoperability Update
- Technology and Broadband Update
- Spectrum Management Update
- How to Get Involved
Interoperability Committee

John Lenihan, Chair

The member organizations of the National Public Safety Telecommunications Council are grateful to the Department of Homeland Security’s Science and Technology Directorate, Office for Interoperability and Compatibility (OIC) and the National Protection and Programs Directorate, Office of Emergency Communications (OEC) Points of view or opinions expressed are those of the originators and do not necessarily represent the official position or policies of the U.S. Department of Homeland Security.
Emergency Medical Services

• Discussing rural use of FirstNet by EMS.
• Researching emergence of GPS enabled medical alarms.
  – Wearable medical alarms which activate while patients are away from home.
  – Some devices may transmit medical data.
• Studying state EMS Communications Plans.

NPSTC is a federation of organizations whose mission is to improve public safety communications and interoperability through collaborative leadership.
• Monitoring pre-hospital video by EMS personnel
  – EMS Telemedicine Report published in 2015
  – Continue to monitor video use by EMS agencies
Cross Border Working Group

- Regulatory Update on Cross Border Base Stations
  - FCC and Canada released guidance on cross border base station placement on June 30th.
  - U.S. public safety agencies can place a base station radio across the border in Canada to support interoperability or local operations.
  - U.S. public safety units can transmit through Canadian public safety agency radio systems.
Cross Border Working Group (Continued)

• Mobile and Portable Radio Use at the Border
  – Complements FCC notice on cross border use of portable and mobile radios issued in November of 2015.
  – Portable and mobile radios may be used across the international border.
Cross Border Working Group (Continued)

• Cross Border 911 data sharing
  - How does a U.S. PSAP access Canadian customer cellular account information?
  - How does a U.S. PSAP obtain GPS coordinates from a Canadian cell phone carrier during a border emergency?
Cross Border Working Group (Continued)

- Emergency Vehicle Border Crossing Best Practices
  - Report on strategies for expedited border crossings to assist fire and EMS agencies whose units transit the U.S./Canadian border.
Radio IO Best Practices Working Group

• This group reviews after-action reports following major incidents and creates best practice recommendations to ensure successful operations.

• The following Best Practice Statements are either near completion or are in progress:
  1. Radio Channel Naming
  2. Training on use of I/O systems and equipment
  3. Change Management Process involving I/O systems
  4. Infrastructure Management for I/O networks
Common Channel Naming Working Group

- ANSI Standard on Interoperability Channel Naming
  - Recently updated the ANSI standard on Common Channel Naming to include new 700 MHz channels.
  - APCO is finalizing the ANSI review and approval process.
Common Channel Naming Working Group

(Continued)

• NPSTC Intrastate Common Channel Naming Report
  – Recently published a report on recommendations for naming intra-state interoperability channels.
Encryption Interoperability Task Force

- FCC rule issued in April mandates use of analog FM for mobiles/portables on FCC-designated interoperability channels in the VHF, UHF and 800 MHz Band.
  - This rule effectively prohibits use of digital encryption on designated nationwide interoperability channels.
  - Encryption is allowed on Tactical channels in all bands.
  - Encryption is allowed on 700 MHz I/O channels (other than Calling Channels).
NPSTC is a federation of organizations whose mission is to improve public safety communications and interoperability through collaborative leadership.

Encryption Interoperability Task Force (continued)

• NPSTC issued a question to the Participants Forum on July 13, 2016 asking for feedback on the new FCC rule.

• Feedback results of July 23, 2016:
  - 42 Responses
  - Mix of local, state, law enforcement and fire
  - Overwhelming support for FCC analog FM rule
  - Only one response raised concerns
The member organizations of the National Public Safety Telecommunications Council are grateful to the Department of Homeland Security’s Science and Technology Directorate, Office for Interoperability and Compatibility (OIC) and the National Protection and Programs Directorate, Office of Emergency Communications (OEC). Points of view or opinions expressed are those of the originators and do not necessarily represent the official position or policies of the U.S. Department of Homeland Security.
Broadband Emerging Technologies Working Group

- Hosted several presentations on current topics.
  - FirstNet Web Status Page
  - NIST overview of sensors and connected systems
  - State Alternative Planning Approaches Panel Discussion
Broadband Emerging Technologies Working Group (continued)

- NIST Smart Cities Project
  - Upcoming presentations:
    - NG911 and broadband data (August)
    - FirstNet Incident Web Status Page Requirements (August)
    - International LTE deployments in the United Kingdom (October)
LMR to LTE Migration Working Group

- Interoperability of public safety LMR with FirstNet mission critical voice
- Created five use cases to validate existing NPSTC PTT requirements
- Working with PSCR to better understand the technical complexity of direct mode/off network communications.
LMR to LTE Migration Working Group
(Continued)

- Examining how Unit ID and Alias may work in LTE
- Reviewing LMR and LTE Responder Emergency feature
  Distribution of the emergency alert across both networks
- Examining differences in the LTE scan function
  LTE has multi-audio monitor, not sequential scan
Broadband Deployable Systems

- LTE Broadband Deployable Network issues for public safety, including backpack, vehicular, towed and airborne solutions.
- Created nine use cases and identified needed operational capabilities and technical challenges.

The Deployable Solution **SHALL** be able to interface with designated alternative backhaul technologies (e.g. satellite, microwave radio, and other backhaul technologies to provide alternative back haul in the event the terrestrial infrastructure is unavailable).

The Deployable Solution **SHALL** accommodate the arrival and departure of other active Deployable Systems with minimal disruption to public safety applications in use.

The Deployable Solution **SHALL** include backhaul connectivity to the NPSBN core network with sufficient capacity to support the available applications and services.

---

**Broadband Deployable Systems Incident Command/COML Decision Matrix**

Version: 10/7/2015

This document is designed to assist an incident commander or COML in selecting the proper deployable system resource. The answers to the matrix questions below would be coupled with additional information on the incident location, type of terrain, and other factors that would impact the use of a backpack, vehicular, towed-trailer COW/SOW, or aerial solution.

The DS needs to support PS User Group Size “A”
(to be defined, large number of users) N = ______

The DS needs to support PS User Group Size “B”
(to be defined, medium number) N = ______

The DS needs to support PS User Group Size “C”
(to be defined, small group) N = ______

---

NPSTC is a federation of organizations whose mission is to improve public safety communications and interoperability through collaborative leadership.
Broadband Deployable Systems (continued)

- Finalizing list of public safety requirements for broadband deployable systems, including interoperability at the U.S./Canada border.
- Finalizing an Incident Commander check list with recommendations on deployable systems usage.
Radio Programming Compatibility Requirements (Radio PCR)

• Performing a Quality Assurance Check on a new version of the PAM Tool with new 700 MHz channels added.
• Asking industry partners to verify that their subscriber information listed in the PAM Tool is correct.
• Planning a face to face meeting on September 20-21 in Houston.
Unmanned Aircraft Systems (UAS) and Robotics

- Heard presentations on the following topics
  - Larimer County UAS Program (accident scene reconstruction)
  - Use of UAS for SAR (by Texas A&M University)
  - Regulatory guidance on UAS (by FAA)
  - Michigan State Police Aviation UAS program
  - Persistent Close Air Support, State of Arizona
Unmanned Aircraft Systems (UAS) and Robotics

• Working on outreach documents
  - Considerations for public safety agencies when implementing a UAS program
  - Overview of current operational uses of UAS/Robotics by Public Safety
  - Public Safety communications aerial platforms via UAS
Video Technology Advisory Group (VTAG)

- Policy Considerations for Public Safety Video Programs
  - Final report released by Video Quality in Public Safety (VQIPS)
  - Available on NPSTC website
- Supported the Video Analytics in Public Safety (VAPS) conference sponsored by NIST.
  - Reviewing public safety agency implementation of video systems and use of analytics.
Video Technology Advisory Group (VTAG)

- Preparing sessions for the upcoming VQIPS Annual Workshop, being held in Seattle, WA on August 31 and September 1, 2016.
The member organizations of the National Public Safety Telecommunications Council are grateful to the Department of Homeland Security’s Science and Technology Directorate, Office for Interoperability and Compatibility (OIC) and the National Protection and Programs Directorate, Office of Emergency Communications (OEC) Points of view or opinions expressed are those of the originators and do not necessarily represent the official position or policies of the U.S. Department of Homeland Security.
Spectrum Management Committee

- Found minimal changes in T-Band licenses since 2013
- Counted 90M people in 11 T-Band areas public safety serves
- Catalogued 325 full power & Class A TV stations in T-Band
- Reaffirmed conclusions from March 15, 2013 NPSTC T-Band Report
Spectrum Management Committee

- NPSTC petitioned FCC to provide railroad police eligibility for public safety interoperability channels.
- Historically, such use has required MOUs with multiple jurisdictions.
- Decision on rule changes expected soon.
**Spectrum Management Committee**

- 4.9 GHz Public Safety Band (50 MHz Total)
- FCC Opened Proceeding in 2012 to Modify Rules
- NPSTC 4.9 GHz National Plan Recommendations October 2013
- APCO 4.9 Task Force Report: September 2015
- We Expect FCC Further Proposal

**Point-To-Point**

- Improved Frequency Coordination & Licensing
- Access by Critical Infrastructure
- Airborne/Robotic Use

NPSTC is a federation of organizations whose mission is to improve public safety communications and interoperability through collaborative leadership.
Spectrum Management Committee

- 5.9 GHz Dedicated Short Range Communications (DSRC)
- Vehicle-to-Vehicle & Vehicle-to-Roadside Communications
- Wi-Fi Proponents Pressing to Share DSRC Spectrum
- FCC Proposed Plan to Test Spectrum Sharing

NPSTC is a federation of organizations whose mission is to improve public safety communications and interoperability through collaborative leadership.
NPSTC Spectrum Committee

• FCC’s Technological Advisory Council (TAC) studying changes in noise floor over last 20 years.

• NPSTC comments filed August 11, 2016 speak to noise in proximity of energy-efficient lighting devices.

• NPSTC comments also recommend studying noise near wind farms and cell sites.
NPSTC Filings with FCC in 2016

How to Get Involved

Barry Luke, NPSTC Deputy Director

The member organizations of the National Public Safety Telecommunications Council are grateful to the Department of Homeland Security’s Science and Technology Directorate, Office for Interoperability and Compatibility (OIC) and the National Protection and Programs Directorate, Office of Emergency Communications (OEC). Points of view or opinions expressed are those of the originators and do not necessarily represent the official position or policies of the U.S. Department of Homeland Security.
NPSTC is a federation of organizations whose mission is to improve public safety communications and interoperability through collaborative leadership.
National Interoperability Exchange (NIIX)

- A free centralized, secure warehouse to store and share National Repository and community documents.
- A website with tools to allow easy collaboration, communication, and sharing of information within communities.
- Locally controlled.

NPSTC is a federation of organizations whose mission is to improve public safety communications and interoperability through collaborative leadership.
Social Media Outreach

- Outreach and Distribution
  - Constant Contact
  - NPSTC Web Site
  - NPSTC Blog
  - Linked-In
  - Facebook
  - Twitter
  - Coordinate with industry publications
  - Broadband Directory
Reports Available for Review

- Reports located on NPSTC website, www.npstc.org
  - Public Safety Grade and Site Hardening Requirements
  - Mission Critical Voice Over LTE
  - Master 700 MHz Broadband SOR
  - Launch SOR Qualitative
  - Local Control Definitions
  - Priority and Quality of Service
  - Push to Talk Requirements for Public Safety
NPSTC is a federation of organizations whose mission is to improve public safety communications and interoperability through collaborative leadership.
Thank you!
