The National Law Enforcement and Corrections Technology Center is supported by Cooperative Agreement #96–MU–MU–K011 awarded by the U.S. Department of Justice, National Institute of Justice. Analyses of test results do not represent product approval or endorsement by the National Institute of Justice, U.S. Department of Justice; the National Institute of Standards and Technology, U.S. Department of Commerce; or Aspen Systems Corporation.

The National Institute of Justice is a component of the Office of Justice Programs, which also includes the Bureau of Justice Assistance, Bureau of Justice Statistics, Office of Juvenile Justice and Delinquency Prevention, and Office for Victims of Crime.
# TABLE OF CONTENTS

The National Law Enforcement and Corrections Technology Center–Rocky Mountain ........... ix

Acknowledgments .............................................................. ix

Introduction ..................................................................... 1

Part 1. Planning and Managing a Communications Project ............................................. 3

## Chapter 1. What It Takes to Succeed

- A Plan ........................................................................ 5
- Time, Money, and Resources ........................................... 5
- Getting Started .......................................................... 6
  - What Do You Have Now? ......................................... 6
  - What Do You Need? ................................................ 6
  - What Are Your Options? .......................................... 7
  - How Much Will It Cost? ........................................... 8
  - How Do You Implement the Project? ......................... 9
- Getting Help ............................................................ 9
- Other Agencies ........................................................ 9
- Consultants ............................................................. 9
- Vendors ............................................................... 10

## Chapter 2. Planning the Project

- Realistic Schedule .................................................... 11
- Project Team(s) ....................................................... 11
- Project Manager ....................................................... 12
  - Responsibility ..................................................... 12
  - Authority ........................................................... 12
  - Time ................................................................. 12
  - Management Support .......................................... 12
  - Physical Resources ............................................. 12
- Other Team Members ............................................... 12
- Budget .................................................................... 13

## Chapter 3. Obtaining Funds

- Types of Funds ....................................................... 15
- Sources of Funds .................................................... 15
  - Federal Sources .................................................. 15
Chapter 4. Buying What You Need ................................................. 23
How to Buy .................................................................................. 23
Competitive Procurement ........................................................... 23
Noncompetitive Procurement ...................................................... 23
Sole Source Procurement ........................................................... 24
Contract for Operational Services ................................................ 24
Cooperative Purchasing .............................................................. 24
Western States Contracting Alliance ............................................ 24
Leasing .......................................................................................... 25
Outsourcing ................................................................................... 26
Request for Information (RFI) .................................................... 26
Competitive Procurement (RFP) ................................................... 26
Request for Proposal (RFP) ........................................................... 27
RFP Process .................................................................................. 27
Develop the RFP ........................................................................... 27
Issue the RFP ................................................................................. 28
Evaluate Responses ....................................................................... 29
Select Vendor ............................................................................... 30
Negotiate Contract ....................................................................... 30
Manage the Project ....................................................................... 31
Acceptance Testing ....................................................................... 32

Part 2. Wireless Communications Technology ................................ 33

Chapter 5. Voice Versus Data ....................................................... 35
Voice Versus Data ......................................................................... 35
Analog Versus Digital ..................................................................... 36
Analog Radio Systems ..................................................................... 37
Digital Radio Systems .................................................................... 37
Transmission Differences .............................................................. 38
Encryption ....................................................................................... 39

Chapter 6. Characteristics of Radio Systems .............................. 41
Understanding Radio Terms ........................................................ 41
Wave .............................................................................................. 41
Wavelength .................................................................................... 42
# Table of Contents

- Cycle ................................................................ 42
- Frequency ............................................................. 42
- Spectrum and Bands ..................................................... 43
  - Public Safety Bands .................................................. 44
- Channels ................................................................ 44
  - Mobile Radio System Frequencies .............................................. 46
  - Frequency Selection Considerations .......................................... 46
    - Coverage ................................................................ 46
    - Building Penetration .................................................. 46
    - Skip ...................................................................... 47
    - Noise ..................................................................... 47
    - Antenna Size ........................................................ 47
- Transmitters and Receivers ................................................... 47
  - Transmitters ................................................................ 47
  - Receivers .................................................................. 48
- Antennas ....................................................................... 50
  - Antenna Gain .......................................................... 50
  - Types of Antennas ...................................................... 52
    - Base Station Antennas ................................................ 52
    - Directional Antennas .................................................. 52
    - Mobile Antennas ..................................................... 53
    - Portable Antennas .................................................... 53
    - Smart Antennas ..................................................... 54
  - Effective Radiated Power (ERP) ............................................ 55
  - Interference ............................................................ 55
  - Radiation ............................................................. 56
  - Local Regulations Controlling Antennas ...................................... 56
- Radio Coverage ............................................................ 56
- Duplexers, Combiners, Multicouplers ........................................... 58
  - Duplexers ................................................................ 58
  - Combiners ................................................................ 59
  - Multicouplers .......................................................... 61
- Multiple Access Systems ..................................................... 61
  - Frequency Division Multiple Access (FDMA) .................................. 61
  - Time Division Multiple Access (TDMA) ...................................... 62
  - Code Division Multiple Access (CDMA) ...................................... 62
    - Frequency Hopping ................................................... 63
    - Direct Sequence ...................................................... 63
- Packaging Data .................................................................. 63

## Chapter 7. Current Public Safety Radio Systems .................................... 65
- Paging Systems ............................................................. 65
- Short Messaging Systems (SMS) ............................................... 66
- Two-Way Simplex Radio Systems ............................................... 66
- Two-Way Mobile Relay Systems ............................................... 67

The National Law Enforcement and Corrections Technology Center–Rocky Mountain

The National Law Enforcement and Corrections Technology Center (NLECTC) system was created in 1994 as a component of the National Institute of Justice’s (NIJ’s) Office of Science and Technology. NLECTC’s goal, like that of NIJ, is to offer support, research findings, and technological expertise to help State and local public safety personnel do their jobs safely and efficiently.

NIJ’s NLECTC system consists of facilities located across the country that are co-located with an organization or agency that specializes in one or more specific areas of research and development. Although each of the NLECTC facilities has a different technology focus, they work together to form a seamless web of support, technology development, and information to help the public safety community.

Located at the University of Denver, NLECTC–Rocky Mountain focuses on communications interoperability and the difficulties that often occur when different agencies and jurisdictions try to communicate with one another. This facility works with public safety agencies, private industry, and national organizations to implement projects that will identify and field test new technologies to help solve the problems of interoperability. NLECTC–Rocky Mountain also houses the newly created Crime Mapping Technology Center, the training and practical application arm of NIJ’s Crime Mapping Research Center. The Rocky Mountain facility also conducts research into ballistics and weapons technology, as well as information systems.

Acknowledgments

The authors wish to acknowledge and thank the following individuals and organizations for their invaluable guidance and assistance in the preparation of this guidebook:

The staff at NLECTC–Rocky Mountain: Thomas Tolman, Robert Epper, Gene McGahey, David Funk, Joni Morris, Courtney Klug, Laura Lippman, and Sue Kaessner.

For providing background information and materials: Patrick Hobby and Barb May (Motorola), Stephen Ruskin (Ericsson), Robert Kuch (Nextel), Doug Daniels (AT&T Wireless), Larry Krenek (LCRA), Mark Minnick (San Marcos PD), and Gregg Miller (RACOM).

Our advisory panel, for the first edition: Scott Snyder (Longmont Fire Department), Terri Thornberry (Durango/La Plata Communications), Frank Bishop (Greeley/Weld Communications), Mary Moore (Fort Collins Communications), Mike Borrego (State of Colorado Telecommunications), Scott Morrill (Gunnison Communications), Ed Connors (Denver Police Department), and Emery Reynolds (Arapahoe County Sheriff’s Department).

Our Advisory Committee, for the second edition: Steve Cooper (Denver Police Department), Tony Davidson (Atlanta Fire Communications), Doug Edmonds (Northwest Central Dispatch), Chris
Fischer (Valley Communications), Chris Hellewel (Spillman Technologies), Charlie Hoffman (NTIA), Ted Jacoby (Seattle Police Communications), Andy MacFarlane (Phoenix Fire Department), Rick Murphy (PSWN), Joe Peters (Sheriff’s Association of Texas), Tom Raabe (Loveland Police Communications), Emery Reynolds (Arapahoe County Sheriff’s Department), Tim Skalland (Shasta Area Safety Communications Agency), Ray Smith (Ohio Regional Planning Coordinator), Tim Walters (InfoTech Marketing).
